

Subject card

Subject name and code	Basics of Bioprocess Engineering, PG_00058406								
Field of study	Biotechnology								
Date of commencement of studies	October 2022		Academic year of realisation of subject			2022/2023			
Education level	second-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	1		ECTS credits			4.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Process Engineering and Chemical Technology -> Faculty of Chemistry								
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Donata Konopacka-Łyskawa						
	Teachers		dr hab. inż. Donata Konopacka-Łyskawa						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project		Seminar	SUM	
	Number of study hours	30.0	0.0	0.0	30.0		0.0	60	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes include plan				Self-study		SUM	
	Number of study hours	60	8.0			32.0		100	
Subject objectives	To familiarize students with the basic concepts of selected dynamic operations (fluid flows, mixing, filtration, settling of particles), the heat exchange, and the mass transfer. Presenting students the opportunities to use mathematical equations in the description of the unit operations used in bioprocess engineering. Developing students' computing skills for the selected unit operations.								
Learning outcomes	Course outcome Subject outcome Method of verification								
	[K7_W10] has knowledge in the field of bioprocess technology and engineering and knowledge in the field of engineering design of technical objects and processes including engineering graphics with the use of computer-aided design and databases		The student has knowledge of selected operations and unit processes used in biotechnological processes, as well as mathematical tools used to design these processes.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects			
	independently formulate questions to solve a given problem or task; is able to plan the execution of a		The student is able to use the knowledge and skills in the field of bioprocess engineering to solve problems that arise during the design and implementation of biotechnological processes on an enlarged scale.			[SK3] Assessment of ability to organize work [SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work			
	[K7_U10] is able to use knowledge about possibilities, aims and limitations of biotechnology to develop, design and obtain products and biotechnological processes in the area of his/her specialization		heat and mass transfer processes, indicate the driving force and prepare the mass and heat balance of selected processes. The student is able to perform			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task			
Subject contents	Lecture: Properties of fluids. The flow of real fluids, the flow of non-Newtonian fluids. Transport of liquid and gaseous mixtures. Heat exchange. Mixing. Filtration, centrifugation, sedimentation. Separation of mixtures using membrane methods. Selected mass exchange processes: extraction, adsorption, crystallization, drying (including lyophilization). Project: calculation of tank emptying time and pressure losses during fluid flow, heat exchanger calculations, basics of membrane process calculations and design of a selected membrane process, extraction, crystallization and drying process calculations; design of the selected mass exchange process.

Prerequisites and co-requisites	basic knowledge of mathematics, physics and physical chemistry						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Project	60.0%	10.0%				
	Written exam	60.0%	60.0%				
	Mini-projects	60.0%	30.0%

Example issues/ example questions/ tasks being completed	Explain the calculation method of the time needed to the liquid flows from the tank. What parameters affect the time of liquid outflow from the tank? How to speed up the time needed to empty the tank? List the parameters characterizing the granular bed. Describe one of the methods for determining the porosity of the bed.						
	Explain how you can increase the heat transfer coefficient in forced convection.						
	4. Draw any installation consisting of two membrane modules. Describe the streams. Write the mass balance of the component retained in a single module and the entire plant.						
	5. Draw the scheme of multistage co-current extraction. Explain how the number of extraction stages can be determined when the composition and weight of feed, the composition and weight of a single batch of secondary solvent, and the degree of extraction are known.						
	6. Explain how the particle size distribution changes during crystallization.						
Work placement	Not applicable
