

Subject card

Subject name and code	Molecular Diagnostics in Medicine and Food Industry, PG_00058418						
Field of study	Biotechnology						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Microbiology -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Beata Krawczyk				
	Teachers		dr hab. Beata Krawczyk				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The aim of the course is to acquaint the student with molecular methods, applied for medical diagnosis and food industries, overview the achievements and tools of molecular biology in the diagnosis, overview news of the diagnostics market.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K02] is aware of the limitations and the necessity of continuous development of knowledge and technology; understands the need for education and constant training		Understand how molecular techniques are organised and what their strengths and weaknesses are. Understand why new developments in molecular diagnostics are needed.		[SK2] Assessment of progress of work [SK3] Assessment of ability to organize work		
	[K7_W01] has advanced knowledge of methods of genetic engineering and molecular genetics, functioning of the immune system and mechanisms of immune system response, diagnostic methods, and analytical methods in the area of specialty		Knows the principles of designing new diagnostic tests. Has knowledge of methods that can be implemented for molecular diagnostics. Is able to discuss the problem and propose an appropriate solution.		[SW3] Assessment of knowledge contained in written work and projects		
	[K7_U03] an propose applications of model organisms, microorganisms, viruses and biomolecules derived from them to perform bioprocesses and obtain desired substances		The student has knowledge about available solutions on the molecular diagnostics market.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject		
	[K7_U05] is able to apply instrumental methods of quantitative and qualitative analysis and studies on activity of biomolecules, select and apply diagnostic and analytical methods in the field of his/her specialty with particular emphasis on genetic, molecular and microbiological diagnostics and diagnostics based on antigen-antibody reaction		The student is able to assess the sensitivity and specificity of the test; The student is able to recognize false positive and negative results.		[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	<p>Lectures:</p> <ul style="list-style-type: none">Personalized medicine - definition; Laboratory Diagnostics Act. Who can work in laboratory diagnostic? Range of molecular diagnostic applications in medicine and food industry. The most important discoveries that have been used in molecular diagnostics. Rules for the introduction of new diagnostic assays on the market. Guidelines for safe work practices in human and animal medical diagnostic laboratories. Diagnostic criteria for validation method. Collection, storage and transport of samples.Nucleic acid hybridization techniques and application in microbiology, in diagnosis of genetic diseases and cancer (hybridization in solution and on a solid, probe selection, hybridization formats, reverse hybridization, elements of cytogenetics and hybridization <i>in situ</i> (FISH techniques), DNA microarrays, elements of transcriptomics.Next-generation sequencing - comparison of efficiency and effectivenessWhat is the epidemiology? Molecular methods in epidemiology. Detection of infection, identification of species and typing of bacterial strains using the classical and molecular techniques (phage typing, typing bacteriocins, plasmid profile analysis, pulse field gel electrophoresis REA-PFGE, DNA fingerprinting methods). The criteria for selecting methods and criteria for the interpretation of genetic patterns in epidemiological studies.Molecular diagnostics in virology detection of blood-borne viruses. Immunodiagnostics, nucleic acid detection, of HCV, HBV, HIV, CMV. Application of Real-time PCR in the microbiological analysis (food and biopharmaceuticals).Biosensors in diagnosticOMICS technics - applications <p>Laboratory: Simplex PCR. Identification of the species <i>E. faecalis</i> and <i>E. faecium</i> by PCR; Application of multiplex PCR for identification of <i>Staphylococcus aureus</i>, and the -lactam antibiotics resistance. 3. Amplification of the human CCR5 gene - the detection of deletions 32pz-resistance to HIV infection. Isolation of the human DNA and Sex determination by polymerase chain reaction (PCR) analysis of the X-Y homologous amelogenin gene. DNA genotyping of bacterial strains.</p>		
Prerequisites and co-requisites	<p>Pass exams: Microbiology, Molecular biology,</p> <p>additionally: General immunology</p>		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	report, written test	60.0%	50.0%
	lecture- exam- written test	60.0%	50.0%
