Subject objectives	<p>The class is supposed to guide students in practical skills related to the computer-aided design. The choice of tools is based on the desire to provide solutions as versatile as possible. In particular, the student shall be helped with:</p> <ul style="list-style-type: none">- understanding and creating standard paper product documentation (AutoCAD and similar programs)- understanding the specifics of 3D design, based on at least one of the currently popular programs (Fusion)- application of engineering simulation methods, primarily based on the FEA (free Salome pre-processor, ANSYS computing system)						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_U07	The Student is capable of estimating effort and approximate cost of his/her design work.			[SU2] Assessment of ability to analyse information		
	K6_U03	The student knows the commands of AutoCAD (lub LibreCAD); he/she is able to use software such as Fusion 360 or OnShape, Salome, Ansys.			[SU1] Assessment of task fulfilment		
	K6_W05	Not applicable.			[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>Spreadsheet: revision of skills AutoCAD or equivalent program: interface basics, commands, 2D exercises. ANSYS or equivalent program: physics simulation of single parts (mechanics, heat transfer, optional electromagnetism) - comparison with analytical solutions and experiment, where possible SALOME + Calculix - free software for 3D modeling and FEM calculations</p> <p>FUSION 360 or OnShape- a popular, intuitive 3D modeling program, with calculation modules and the option of designing printed circuit boards</p>
