

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Inference and classification in data analysis, PG_00044133							
Field of study	Mathematics							
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025			
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			Polish		
Semester of study	6		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Divison of Differential Equations and Applications of Mathematics -> Institute of Applied Mathematics -> Faculty of Applied Physics and Mathematics							
Name and surname of lecturer (lecturers)	Subject supervisor		Beata Jackowska-Zduniak					
	Teachers		mgr inż. Katarzyna Tessmer Beata Jackowska-Zduniak					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	15.0	0.0	15.0		0.0	60
	E-learning hours inclu	ıded: 0.0	-					
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		5.0		35.0		100
Subject objectives	To teach analysis of observed data with respect to their structure, model and randomness and to teach algorithms of the statistical decision scheme. To teach using the appropriate statistical algorythms and getting the correct interpretation. To teach statistical methods of data clasiffication, methods of their evaluation and getting the correct interpretation.							

Learning outcomes	Course outcome	Subject outcome	Method of verification		
	K6_W05	Students know the examples of selected mathematical and statistical notions as well as the examples of applications of given methods and algorithms.	[SW1] Assessment of factual knowledge		
	K6_U12	Students are capable to analyse the data with respect to their structure, randomness and the applicable statistical algorithm(s). Students are capable to exploit the appropriate algorithm and correcly interpret the results. Students demonstrate the ability to present mathematical issues and analysis results to the wider audience.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	К6_К01	Students know how to extend their knowledge in the statistical data analysis and data classification and grouping methods by using the existing and appearing literature - the handbooks as well as the new bibliography.	[SK5] Assessment of ability to solve problems that arise in practice		
	K6_W08	Students know the mathematical foundations of statistical algorithms. Students know basic statistical methods implemented in R and data analysis and visualisation methods.	[SW3] Assessment of knowledge contained in written work and projects		
	K6_U11	Students are capable to analyse the data with respect to their structure, randomness and the applicable statistical algorithm(s). Students are capable to exploit the appropriate algorithm and correcly interpret the results. Students determine the parameter estimators of discrete and continuous probability distributions. Students use the test statistic probability distribution. Students apply central limit theorem to determine the test statistic distribution.	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information		
Subject contents	Introductory analysis of data - tables Hypothesis verification. Linear regre	, distributions, graphical presentatior ssion. Multiple regression. ANOVA. (. Point and interval estimation. Cluster analysis - k-means algorithm.		
Prerequisites and co-requisites	Courses completed: Probability Calc	culus.			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade		
	Colloquim 1	51.0%	30.0%		
	Colloquim 2	51.0%	30.0%		
	Project (1 [20%], 2 [20%])	51.0%	40.0%		
Recommended reading	Basic literature	 W. Krysicki, J. Bartos, W.Dyczka, K. Królikowska, M. Wasilewski, Rachunek prawdopodobieństwa i statystyka matematyczna w zadaniach, Statystyka matematyczna 2, Wyd. Naukowe PWN, Warszawa, 2004. S. Wierzchoń, M. Kłopotek, Algorytmy analizy skupień, Wyd. 	eResources addresses	Adresy na platformie eNauczanie:			

Example issues/ example questions/ tasks being completed	For a given probability distribution with parameter a, determine a maximum - likelihood estimator for a parameter a.			
	A random sample (X,Y) has a realisation of size k of : (x_i, y_i) , i =1,, k. Find parameters a and b of a linear regression line equation y = ax + b using the method of least squares.			
	Basic methods and tools in statistical data exploration.			
Work placement	Not applicable
