

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Software Engineering, PG_00044135							
Field of study	Mathematics							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	1		Language of instruction			Polish		
Semester of study	2		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Department of Differential Equations and Mathematical Applications -> Faculty of Applied Physics and Mathematics							ics and
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Paweł Pilarczyk					
	Teachers		dr hab. Paweł Pilarczyk					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	:t	Seminar	SUM
of instruction	Number of study hours	30.0	0.0 15.0		15.0	0.0		60
	E-learning hours incl	uded: 0.0		i		-		
Learning activity and number of study hours	Learning activity Participation ir classes include plan		i didactic Participation in ed in study consultation hours		Self-study SUM			
	Number of study 60 hours			5.0		35.0 100		
Subject objectives	Becoming familiar with basic methods of software engineering and acquiring the ability to apply the methods in practice. This concerns group work on a large scale IT project at all the stages of softw production: beginning with requirements engineering, through requirements analysis, software desimplementation, testing, installation, to the stage of software maintenance. Also getting acquaintee basic issues regarding IT project management, such as quality management.							these ftware lesign, ted with
Learning outcomes	Course outcome		Subject outcome		Method of verification			
	K7_U13		Can design and create software that satisfies given requirements.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	K7_W08		Knows software engineering methods for designing, creating, testing and maintaining software.			[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation		
	K7_W11		Describes selected software development processess (such as waterfall, iterative, agile). Can develop software in a team. Is able to conduct requirements solicitation, requirements analysis, and to design software. Can use UML to model selected aspects of software. Knows and understands ethics code of a software engineer. Knows how to proceed with software design and development.			[SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice [SK4] Assessment of communication skills, including language correctness [SK3] Assessment of ability to organize work [SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		

Subject contents	Lecture: Introduction to software engineering. Ethics code. Software development processes. Requirements engineering. Structural and object-oriented methods. Using the UML in modelling. Testing software. IT project management, quality management. Software maintenance. Critical systems. Agile Manifesto and agile methods, including Scrum. Lab and project: Applying the software engineering methods to designing specific software, including preparation of UML diagrams and user stories. Practical development of software prototypes.						
Prerequisites and co-requisites	Basic ability to write computer programs, e.g. in Python, C, or HTML/JavaScript.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	quizzes (in writing, 10 minutes each)	60.0%	50.0%				
	homework, project, presentations, etc.	60.0%	50.0%				
Recommended reading	Basic literature Krzysztof Sacha, Inżynieria oprogramowania, PWN 2010. Mariusz Chrapko, Scrum. O zwinnym zarządzaniu projektami. Wyd						
		II rozszerzone, Helion 2014.					
	Supplementary literature	lan Sommerville, Inżynieria oprogra	mowania, WNT 2003.				
		Roger S. Pressman, Praktyczne podejście do inżynierii oprogramowania, WNT 2004.					
		Russ Miles, Kim Hamilton, UML 2.0. Wprowadzenie, Helion 2007.
