

Subject card

Subject name and code	Monitoring and Diagnosis in Control Systems, PG_00038292						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Control Systems Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Michał Grochowski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	20.0	0.0	20.0	0.0	0.0	40
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	40		10.0		50.0	100
Subject objectives	Gain knowledge related with data driven monitoring and diagnosis system within the area of control systems. The use of computational intelligence methods to build diagnostic models. Learn how to properly use known methods for the design and implementation of basic diagnostic systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U05		The student selects appropriate information and communication techniques for the implementation of diagnostic systems.		[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information		
	K7_U10		Student designs and implements simple diagnostic systems. On the basis of the conducted research, the student is able to draw conclusions.		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	K7_W05		Student designs and implements simple diagnostic systems. He uses selected methods of computational intelligence in the projects. He uses the software tool: Matlab/Simulink at an advanced level. On the basis of the conducted research, he knows how to draw conclusions.		[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	Data acquisition systems in control systems. Data processing. Process monitoring and diagnosis. Data driven models in process diagnosis. Multivariable Processes Analysis. Computational intelligence methods. Actuators and measuring devices fault diagnosis. Early fault and anomalies detection systems. Fault tolerance control systems.						
Prerequisites and co-requisites	Knowledge of the following subjects: Mathematics, Numerical Methods, optimization and decision making, Methods of artificial intelligence, the Methods and basis of identification and Modeling and identification						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Laboratory		50.0%		40.0%		
	Lecture test		50.0%		20.0%		
	Exam		50.0%		40.0%
