

Subject card

Subject name and code	, PG_00056276						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Milena Supernak				
	Teachers		dr inż. Milena Supernak dr inż. Paulina Strąkowska dr inż. Magdalena Jażdżewska mgr inż. Dariusz Duda				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	Presentation of the field of technical knowledge which is materials science. To acquaint the student with the structure of metals and their alloys. Determination and study of the structure of metals. Examination of mechanical and physical properties of iron alloys and non-ferrous metal alloys, such as aluminum and copper.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems		Student defines the properties of materials. The student identifies the basic properties of metallic materials. The student identifies the types of research on the crystal structure: macroscopic and microscopic. Student defines phase and structural components of Fe-C alloys. Student defines iron alloys as well as aluminum alloys and copper alloys		[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	[K6_W03] has a basic knowledge on hydromechanics, thermodynamics, machine construction, ecology, materials science and electronics necessary to understand the construction and operation principles of ocean technology objects and equipment		The student analyzes the relationship between the production, structure, properties and functionality of the material.		[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		

Subject contents	1. Materials and their importance in technology. Characteristics of the main groups of materials. 2 .. Characteristics of solids. Structure of materials. Structure defects. 3.. Construction of metal alloys. 4. Phase equilibrium systems. The iron-carbon system. 5. Iron-carbon alloys. 6. Heat treatment. Thermo-chemical treatment. 7. Alloy steels. 8. Standardization, classification and marking systems for steel and cast iron. 9. Copper and copper alloys. 10.Aluminium and aluminum alloys. 11. Bearing Alloys. 12. Degradation of metal materials		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Credit for the laboratory - participation, tests and reports on the completed topics	60.0%	50.0%
	Passing the content of the lecture - written form	60.0%	50.0%
Recommended reading	Basic literature	<ul style="list-style-type: none">Głowacka M., Zieliński A. : Fundamentals of Materials Science. WPG, Gdańsk 2011Dobrzański L.A. : Fundamentals of materials science and metallurgy .. WNT, Warsaw, 2002.	
	Supplementary literature	<ul style="list-style-type: none">Dobrzański L.A. : Metal engineering materials, WNT Warsaw 2004Dobrzański L.A. : Engineering materials and material design, WNT Warsaw 2006	
	eResources addresses	Adresy na platformie eNauczanie: METALOZNAWSTWO- PG_00056149, PG_00056276, PG_00056241 - Moodle ID: 25766 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=25766	
Example issues/ example questions/ tasks being completed	1. Macro and microscopic research2. Analysis of the structures of the iron-carbon system3. Tests of iron alloys (cast steel, cast iron, unalloyed steels)4. Alloy steels5. Research on copper and its alloys6. Tests of aluminum and aluminum alloys		
Work placement	Not applicable
