GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Fundamentals of Ship Automation, PG_00045063					
Field of study	Ocean Engineering, Ocean Engineering					
Date of commencement of studies	October 2020		Academic year of realisation of subject		2022/2023	
Education level	first-cycle studies		Subject group			
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	3		Language of instruction		Polish	
Semester of study	5		ECTS credits		2.0	
Learning profile	general academic profile		Assessment form		assessment	
Conducting unit	Faculty of Ocean Engineering and Ship Technology					
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Mohammad Ghaemi			
	Teachers		dr inż. Mohammad Ghaemi			

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	3.0	17.0	50

Subject objectives	The main aim of the subject is education of students in the range of 3 fundamentals of marine control systems: course and trajectory control, ship propulsion system control and roll stabilisation systems.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems	The student has a structured knowledge of engineering design methods enabling the implementation of conceptual designs in the field of major ship control systems, including the course and trajectory control system, the propulsion control system, and the ship's roll stabilization system.	[SW1] Assessment of factual knowledge
	[K6_W08] has knowledge of the principles of sustainable development	The student has knowledge of the principles of sustainable development in the field of ship automation; including basic knowledge in the field of analyzing and designing automation systems used in ship technology for guidance and control of ocean engineering facilities, taking into account motion stability, propulsion, marine and maneuvering features.	[SW1] Assessment of factual knowledge

Subject contents	1. The concept and introduction and principle definitions 2. Mathematical model of ship motion 3. Environmental disturbances: wind, wave and current 4. Ship manoeuvrability 5. Ship course control 6. Ship trajectory control 7. Ship roll control 8. Ship speed control 9. Ship motion model identification

Prerequisites and co-requisites	Preceding subjects: 1. Fundamentals of ocean engineering 2. Mechanics I 3. Fundamentals of ship power plants, 2. Fundamentals of automatics.

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	1 colloquium, 100 points, duration: 1 hour	56.0%	96.0%
	Presence and activity: 5 points	0.0%	4.0%

Recommended reading	Basic literature	**Basic literature** 1. 2. Fossen T. I., Handbook of Marine Craft Hydrodynamics and Motion Control, John Wiley & Sons, 2011. 2. Thor I. Fosen: Marine Control Systems, Marine Cybernetics AS, 2002.
	Supplementary literature	1. Thor I. Fossen: Guidance and Control of Ocean Vehicles. John Wiley and Sons, 1994.
