

Subject card

Subject name and code	Motion mechanics of Yachts 1, PG_00045070						
Field of study	Ocean Engineering, Ocean Engineering						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Ship Manufacturing Technology, Quality Systems and Materials Science -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Krężelewski				
	Teachers		mgr inż. Hanna Pruszek dr inż. Michał Krężelewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The student identifies ship propellers and explains the basics of their operation. He explains the operation of propellers and their cooperation with the ship's hull. Is able to carry out research on the propeller at the stage of the preliminary ship design.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K03] understands non-technical aspects and effects of operation as an engineer, its influence on the environment and is aware of the responsibilities for the decisions taken				[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems				[SW1] Assessment of factual knowledge		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems				[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems				[SW1] Assessment of factual knowledge		
Subject contents	The basic propulsion problem of the ship. Resistance of displacement ships: division, determination methods and model tests. Hydrodynamic characteristics of the airfoil. Ship propellers. The ideal propulsor theory. Geometric characteristics of the propeller. The elementary screw theory. Hydrodynamic characteristics of the propeller: determination methods and model tests. Cavitation phenomenon. Hull - propeller interaction. Overall propulsive efficiency. Propulsive and propeller characteristics. Selection of the serial propeller at the stage of the initial ship design.						

Prerequisites and co-requisites	Fluid dynamics.		
	Principles of naval architecture		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		60.0%	50.0%
		100.0%	50.0%
