

## Subject card

Subject name and code	Boilers and Heat Exchangers, PG_00045072						
Field of study	Ocean Engineering, Ocean Engineering						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Faculty of Ocean Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Roman Liberacki					
	Teachers	dr inż. Roman Liberacki mgr inż. Dominik Kreft					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	4.0		31.0		80
Subject objectives	Familiarize students with the basic processes and laws of heat flow and give them knowledge about the construction and operation of boilers and heat exchangers.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems	The student has knowledge of the construction and operation of boilers and heat exchangers.			[SW1] Assessment of factual knowledge		
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems	The student knows methods of designing of heat exchangers.			[SW1] Assessment of factual knowledge		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems	The student is able to perform basic calculations in order to select a heat exchanger.			[SU1] Assessment of task fulfilment		
Subject contents	Heat conduction. Heat transfer (free convection, forced convection, during vapor condensation. Overall heat transfer coefficient. Types of flow in heat exchangers. Construction of heat exchangers. Selection of heat exchangers. Steam heating system. Boilers, structure and characteristic values. Boilers, fuels for boilers and water in boilers. Boiler materials and boiler damage. Heat transfer in boilers.						
Prerequisites and co-requisites	Knowledge from thermodynamics.						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Task completed assessment	100.0%			50.0%		
	Final colloquium	50.0%			50.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> <li>1. List and briefly describe heat transfer mechanisms.</li> <li>2. Write and explain the Peclet equation</li> <li>3. Explain the difference between fire tube and water tube boilers.</li> <li>4. Determine the heat transfer coefficient of the tested heat exchanger.</li> </ol>	
Work placement	Not applicable
