

## Subject card

Subject name and code	OPERATIONAL RESEARCH, PG_00058584						
Field of study	Economic Analytics						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Katedra Inżynierii Zarządzania i Jakości -> Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jolanta Łopatowska				
	Teachers		dr inż. Jolanta Łopatowska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	8.0	16.0	0.0	0.0	0.0	24
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	24	10.0	66.0	100		
Subject objectives	Recognizes problems in the organization, formulating quantitative models allowing for making rational decisions.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W05] integrates data from multiple sources to analyze complex economic problems		solves problems using optimization tools, integrating data from many areas of the organization's operation		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] designs innovative solutions to complex problems obtaining economic and socially valuable results		selects mathematical models, assessing their usefulness and effectiveness in business practice		[SU4] Assessment of ability to use methods and tools		
Subject contents	<p>The basic problems of operations research - the essential features and the structure of the decision situation.</p> <p>The general form of linear optimization model, interpretation and sensitivity analysis of the solution.</p> <p>Construction of linear optimization models - assortment selection model, cutting model, technological process optimization model, transport model, assignment model of mutually replaceable resources.</p> <p>Graphic method, simpleks algorithm.</p> <p>Elements of nonlinear programming.</p> <p>Multi-criteria models.</p> <p>Elements of graph theory.</p> <p>Planned network - CPA, CPM, PERT, CCPM method.</p> <p>Ford-Fulkerson algorithm.</p> <p>Sequential issue.</p> <p>Elements of dynamic programming.</p>						
Prerequisites and co-requisites	mathematics						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	exam		60.0%		50.0%		
	coloquim		60.0%		50.0%

	eResources addresses	
Example issues/ example questions/ tasks being completed	Application of linear programming to build and solve models of decision situations. Critical path analysis using PERT method.	
Work placement	Not applicable
