

## Subject card

Subject name and code	Design Biotechnological Processes, PG_00058618						
Field of study	Biotechnology						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Chemistry, Technology and Biochemistry of Food -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Robert Tylingo				
	Teachers		dr hab. inż. Robert Tylingo				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	30.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		22.0	75
Subject objectives	Gaining knowledge and skills in the preparation of assumptions necessary to design the course of the biotechnological process and implementation of the project according to the created guidelines.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W08] has a profound knowledge of methods of obtaining biotechnological products, possibilities and limitations related to the design of biotechnological processes, understands the specificity of the biotechnological industry, both in terms of organization, management and economic analysis	The student has knowledge in the selection of processes and unit operations as well as the selection of equipment that meets the requirements specific to biotechnology	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
	[K7_W07] knows issues related to plant and animal raw materials, their quality, impact on human health, processing technology and chemical and biological hazards resulting from process treatment and storage	The student updates knowledge and skills in planning and implementing assumptions for a process project in the field of biotechnology.	[SW3] Assessment of knowledge contained in written work and projects
	[K7_U07] is able to consider bioethical issues and regulations in research planning and design of biotechnological products and processes	The student is able to plan and implement an experimentally created biotechnological project, taking into account legal and technical regulations and restrictions.	[SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools
	[K7_U10] is able to use knowledge about possibilities, aims and limitations of biotechnology to develop, design and obtain products and biotechnological processes in the area of his/her specialization	The student is able to select appropriate biomolecules and biologically active compounds for a given technological process based on the knowledge of their chemical structure.	[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools
	[K7_K03] is conscious and able to explain the importance of the development of science and technology for the economy	The student is able to apply bioethical regulations and the principles of intellectual property protection when planning the course of a biotechnological process.	[SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work
Subject contents	Fundamentals of designing biotechnological processes. Design stages. Elements of the assumptions for the process design. Technological principles. Mass balance and heat balance. Elemental balance of microorganisms growth, efficiency coefficients, oxygen balance, heat balance of microorganisms growth. Process design elements. Scale-up of bioreactors. Similarity criteria. Thermal calculations of transient processes in biotechnological processes. The current state of knowledge related to the product and manufacturing technology selection of the basic concept of the manufacturing method. Review of database systems for inventions and industrial designs. Principles of creating schematic diagrams, technological diagrams and scheduling equipment operation. Examples of biotechnological processes in the food industry applied technological solutions. Examples of biotechnological processes in the pharmaceutical industry applied technological solutions. Universal combined technological systems - cleaning and disinfection systems, measurements and automation. Organization and division of tasks in the implementation of the project. Planning experimental work. Risk assessment in the implemented topic and remedial actions.		
Prerequisites and co-requisites	Basic knowledge in the field of mechanical engineering, chemical apparatus and chemical engineering and biotechnology		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture colloquium	60.0%	50.0%
	Project	100.0%	50.0%
