

Subject card

Subject name and code	Pharmaceutical Biotechnology–Team Project, PG_00058621								
Field of study	Biotechnology								
Date of commencement of studies	October 2022		Academic year of realisation of subject			2023/2024			
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	3		ECTS credits			4.0			
Learning profile	general academic pro	ofile	Assessment form		assessment				
Conducting unit	Department of Pharm	naceutical Tech	nology and Bio	chemistry -> F	aculty c	f Chem	nistry		
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Iwona Gabriel						
	Teachers		dr hab. inż. Iwona Gabriel						
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	0.0	0.0	30.0	30.0		0.0	60	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in stud plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	60		5.0		35.0		100	
Subject objectives	Developing a plan and schedule for implementing a multi-stage research project, solving the research problem and presenting the results obtained.								

Data wydruku: 19.05.2024 21:21 Strona 1 z 2

IRZ_WO2 has advanced knowledge of structure and activity of enzymes and biologically active compounds also in pharmacological context, knows basic instrumental methods of qualitative and quantitative analysis and activity studies of biomolecules IRZ_UO2 has practical skills in commonly used biochemical methods including enzyme activity and kinetics assays, electrophoresis, western blotting, ELISA assays, fluorescence microscopy, flow cytometry IRZ_UO8 can analyze patent documents, can make a preliminary assessment of the patentability of a product, process or substance, can use patent databases IRZ_UO7 is able to consider bioethical issues and regulations in research planning and design of biotechnological products and processes IRZ_UO4 is aware of the need to solve problems and perform tasks, independently formulate questions to solve a given problem or task, is able to plan the execution of a binticroblems. IRZ because the plan the execution of a binticroblems and perform tasks, is able to plan the execution of a binticroblems and perform tasks, is able to plan the execution of a binticroblems and perform tasks, is able to plan the execution of a binticroblems and perform tasks, is able to plan the execution of a binticroblems and perform tasks, independently formulate questions to solve a given problem of the patental problems and perform tasks, independently formulate questions to solve a given problem of the patental problems and perform tasks, independently formulate questions to solve a given problem the patental problems and perform tasks, independently formulate questions to solve a given problem of task; is able to plan the execution of a binticroble alactivity.	dge						
commonly used biochemical methods including enzyme activity and kinetics assays, electrophoresis, western blotting, ELISA assays, fluorescence microscopy, flow cytometry [K7_U08] can analyze patent documents, can make a preliminary assessment of the patentability of a product, process or substance, can use patent databases [K7_U07] is able to consider bioethical issues and regulations in research planning and design of biotechnological products and processes [K7_K04] is aware of the need to solve problems and perform tasks, independently formulate questions to solve a given problem or task; is able to plan the execution of a given problems and resultations methods and techniques to effectively perform planned research methods and techniques to effectively perform planned research tasks. [K7_U08] can analyze patent documents, can make a preliminary assessment of the patentability of a product, process or substance, can use patent databases The student knows bioethical problems and regulations in planning research using microorganisms. The student knows bioethical problems and regulations in planning research using microorganisms. [K7_K04] is aware of the need to solve a given problem or task; is able to plan the execution of a bility to analyse information. The student knows bioethical problems and regulations in planning research using microorganisms. [SU3] Assessment of ability to use knowledge gained from the subject subject. [SU3] Assessment of ability to use knowledge gained from the subject subject. [SU3] Assessment of ability to analyse information. [SU3] Assessment of ability	ie ie						
documents, can make a preliminary assessment of the patentability of a product, process or substance, can use patent databases [K7_U07] is able to consider bioethical issues and regulations in research planning and design of biotechnological products and processes [K7_K04] is aware of the need to solve problems and perform tasks, independently formulate questions to solve a given problem or task; is able to plan the execution of a results and presents the resulting conclusions. results and presents the resulting subject [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to use knowledge gained from a subject [SU2] Assessment of ability to use knowledge gained from a subject [SU2] Assessment of ability to solve a given problems and presents the resulting subject [SU4] Assessment of ability to solve a given problem or task; is able to propose a plan for the synthesis of a biologically active compound and methods for determining its antimicrobial activity.	ie						
bioethical issues and regulations in research planning and design of biotechnological products and processes [K7_K04] is aware of the need to solve problems and perform tasks, independently formulate questions to solve a given problem or task; is able to plan the execution of a problems and regulations in planning research using microorganisms. The student is able to propose a plan for the synthesis of a biologically active compound and methods for determining its antimicrobial activity. I we knowledge gained from the subject [SU2] Assessment of ability the solve problems and regulations in planning research using microorganisms. [SK5] Assessment of ability the solve problems and regulations in planning research using microorganisms. [SK6] Assessment of ability the solve problems that arise in practice [SK2] Assessment of progressions and regulations in planning research using microorganisms.	- 1.						
solve problems and perform tasks, independently formulate questions to solve a given problem or task; is able to plan the execution of a	ie						
larger task by dividing it into partial tasks and draw up an appropriate schedule [SK1] Assessment of group was skills	s of						
the student group receives a project topic regarding the synthesis and testing of the antimicrobial activ sulfonamide derivatives. Then, students group conducts a literature analysis and a review of relevant databases, formulates a concept for solving the problem and prepares a research schedule. During laboratory classes, the student group performs experiments according to a developed schedule. Labor classes end with the preparation and presentation of a report on the implementation of the project. The	databases, formulates a concept for solving the problem and prepares a research schedule. During laboratory classes, the student group performs experiments according to a developed schedule. Laboratory classes end with the preparation and presentation of a report on the implementation of the project. The second part of the design classes includes the analysis of patent documents, a preliminary assessment of						
Prerequisites Knowledge of issues in the field of Biochemistry, Enzymology, Drug Biotechnology and co-requisites							
Assessment methods Subject passing criteria Passing threshold Percentage of the final gradual processing criteria Passing threshold Percentage of the final gradual process and the final	de						
and criteria Assessment of a patent application 50.0% 30.0%							
final report 50.0% 40.0%							
Assessment of a group project 50.0% 30.0%							
Recommended reading Basic literature Supporting materials available on the department home page	e department home page						
Supplementary literature None
