GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Informatics, PG_00044579		
Field of study	Transport		
Date of commencement of studies	October 2022	Academic year of realisation of subject	2023/2024
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	3	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Railway Engineering -> Faculty of Civil and Environmental Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Roksana Licow	
	Teachers	dr inż. Roksana Licow dr hab. inż. Dawid Ryś	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	45	2.0	25.0	72

Subject objectives

The main aim of the course is to showing IT issues used in the transport.

In the course, will be discuss issues :

- SQL databases,
- information technology,
- artificial intelligence,
- machine learning,
- IoT (internet of things),
- Big Data (big data sets),
- Data Minning.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_W04] has basic knowledge of informatics, electronics, telecommunications, automation and control, information technologies, computer graphics, geodesy and satellite navigation which is useful for understanding how it can be applied in transport	After final the course, the student has knowledge of information technologies supporting the following fields of transport: - transport infrastructure (line, point), - diagnostics, - traffic engineering, - transport security (cybersecurity), - capital and personnel management.	[SW3] Assessment of knowledge contained in written work and projects
[K6_U05] able to use IT and graphic techniques typically used for the design, construction, operation and diagnosis of means and systems of transport	Student can to design the concept of transport database. Student can to transfer the designed concept to a database in SQL. Student can to use the data contained in the database and then it implement in a spreadsheet and conducted analysis using Power Pivot.	[SU1] Assessment of task fulfilment

Subject contents

1. Introduction to SQL databases.
2. Concepts: entity, attribute, record, primary key, foreign key.
3. Computer support in the design of infrastructure and rolling stock.
4. Examples of databases in the transport fields.
5. Traffic engineering using IT technology.
6. IT in transport management.
7. Artificial intelligence, machine learning.
8. IoT (Internet of Things).
9. IT in transport safety.
10. Operations on data sets, the use of the JOIN clause in joining tables.
11. Data Minning is used to solve problems in big data analytics.
12. Data analysis in a spreadsheet using Power Pivot.
13. Architecture of database systems. Storage procedure. Transaction.
14. Repetition to the test.
15. Test.

Prerequisites and co-requisites

The student has knowledge of working in a spreadsheet program, eg MS Excel.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Test	60.0%	50.0%
Project 2	50.0%	25.0%
Project 1	50.0%	25.0%
