|  | E-learning hours included: 0.0   |  |  |                  |                                    |   |             |     |  |
| Learning activity<br>and number of study hours | Learning activity  | Participation in<br>classes includ<br>plan |  |                  | Participation in onsultation hours |   | tudy        | SUM |  |
|  | Number of study hours  | 45   |  | 5.0              |                                    |   |             | 75  |  |
| Subject objectives                             | Understanding of importance of logistics processes for transport activity. Understanding of methods and tools for analysis and planning of transportation processes.   |  |  |                  |                                    |   |             |     |  |
| Learning outcomes                              | Course outcome   |  | Subject outcome  |                  |                                    | Method of verification  |             |     |  |
|  | [K6_W10] has basic knowledge of<br>logistics useful for understanding<br>the role of transport in logistics  |  | Ability to properly structure<br>logistics processes.  |                  |                                    |   |             |     |  |
|  | [K6_U12] able to select tools and<br>methods, carry out assessments<br>and simple tests of transport<br>systems to an extent required of<br>the specialty / learning profile   |  | Competence in logistics and<br>transport optimisation software.  |                  |                                    |   |             |     |  |
|  | [K6_K02] understands the need to<br>formulate and communicate to the<br>public information and opinions on<br>the achievements of<br>environmental engineering and<br>other aspects of work of a sanitary<br>industry engineer; is aware of the<br>importance of and understands<br>non-technical aspects and<br>consequences of engineering;<br>takes steps to communicate such<br>information and opinions in a<br>comprehensible manner and<br>present different points of view |  | Ability do identify how<br>transportation and logistics<br>determine social and economic<br>development. |                  |                                    |   |             |     |  |
|  | [K6_W17] has proficiency in<br>transport systems as appropriate<br>for their specialty   |  | Competence to analyse<br>effectiveness of logistics and<br>transportwation processes.                    |                  |                                    |   |             |     |  |
| Subject contents                               | Transportation in logistics. Outsourcing of transport services. Criteria for an analysis of transport and logistics processes. Efficiency of logistics processes. Definiton of spedition company and characteristics of services. Forwamding of dangerous and ovesize loads.   |  |  |                  |                                    |   |             |     |  |
| Prerequisites<br>and co-requisites             | Basics of logistics  |  |  |                  |                                    |   |             |     |  |

| Assessment methods   | Subject passing criteria   | Passing threshold                | Percentage of the final grade |  |  |  |
