

Subject card

Subject name and code	Civil engineering buildings in transportation, PG_00044661						
Field of study	Transport						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Railway Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	Basic knowledge on designing and dimensioning of bridge structures						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U13] able to select tools and methods, carry out assessments and simple tests of transport infrastructure and means of transport to an extent required of the specialty / learning profile		The student is able to identify construction elements, way of carrying loads and has a basic understanding of the principles of dimensioning and designing bridges.				
	[K6_W18] has proficiency in transport infrastructure as appropriate for their specialty		The student is able to define the basic concepts of engineering structures in transport, lists the types of bridges and tunnels, can name the elements of equipment.				
Subject contents	Engineering objects - basic definitions and materials. Materials for building bridges. Static schemes of bridges - beam, plate, frame, arches, trusses, cable stayed, suspended. Loads and influences on bridges. Tunnels. Engineering facilities equipment. Bridge construction technologies.Preliminary design of a bridge with a steel structure.Collection of loads and calculation of steel bridge components.						
Prerequisites and co-requisites	No requirements						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Collection of loads and execution of bridge calculations		60.0%		30.0%		
	Preliminary design of the bridge		60.0%		30.0%		
	Colloquium		60.0%		40.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. List the types of bridges. 2. What bridge structures are made of steel? 3. What is reinforced concrete? 4. Mark the elements that are part of the structure of the bracing. 5. What are the working phases of composite structures? 6. Sketch a cross-section of the road, composite, simple support deck bridge. 7. How is the impact of the wheel against the rail head transmitted? 8. What is a secondary suspension? 9. How are expansion forces transmitted in arch beams? 	
Work placement	Not applicable
