

## GDAŃSK UNIVERSITY

## Subject card

Subject name and code	Urban catchment hyd	rology, PG_00	042522					
Field of study	Environmental Engineering							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction			Polish		
Semester of study	3		ECTS crec	ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Faculty of Civil and Environmental Engineering							
Name and surname	Subject supervisor		dr hab. inż. Katarzyna Weinerowska-Bords					
of lecturer (lecturers)	Teachers		dr hab. inż. Katarzyna Weinerowska-Bords					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	aboratory Project		Seminar	SUM
of instruction	Number of study hours	15.0	0.0	0.0	10.0		0.0	25
	E-learning hours inclu	ided: 0.0						•
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	25		4.0		55.0		84
Subject objectives	Understanding the sp engineering tasks rela computational methor to the issues of choos and the possibilities a	ated to broadly ds in the conte sing the metho	understood ra xt of their relati d to solve the p	inwater manag ionship with hyo problem, the rol	ement. drologic e of the	Knowle al proce	edge and anal esses. Sensit	ysis of izing students

Learning outcomes	Course outcome	Subject outcome	Method of verification		
	[K7_W08] has knowledge necessary to understand the social, economic, legal and other non-technical determinants of engineering activities and their incorporation in engineering practice	Knows the non-technical conditions of the engineer's work in the context of rainwater management issues	[SW1] Assessment of factual knowledge		
	[K7_U06] can use the known mathematical methods and models, if needed, to modify them, for: analysis and design of water systems and their components or water flows, migration of pollutants or water and wastewater treatment and sewage sludge handling	Is able to calculate the amount of rainwater in a catchment for a given design problem, is able to correctly select parameters and calculation coefficients, knows how to discuss them.	[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		
	[K7_U09] can choose tools (analytical or numerical) to solve engineering problems	Is able to choose the appropriate calculation method for the analyzed situation (including determining the time of concentration of the outflow, choosing the precipitation formula, etc.)	[SU4] Assessment of ability to use methods and tools		
	[K7_W09] has deepened, ordered, theoretically developed knowledge related to: hydrology, drainage, water management, flood protection or resource and water intake or water and sewage management	Knows the methods of calculating the amount of rainwater in an urbanized drainage basin. Understands the relationship between hydrological issues and engineer activities. Is able to describe the differences between urban and other drainage basins and explain the resulting consequences for water circulation and computational methodology	[SW1] Assessment of factual knowledge		
	[K7_U12] can design: developed water and sewage system, complex heat source, pool water treatment technology, mechanical ventilation installation or underground water intake, drainage of urban water catchment, reservoir control system during flood seizure or water treatment technology, domestic waste water treatment plant	is able to perform calculations for the design of standard drainage systems, taking into account a more thorough analysis of hydrological conditions	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
Subject contents	The hydrological cycle in natural and modified environment. Impact of urbanization on the hydrology cycle and quantity of runoff. Definition of rainfall-runoff model. Classifications of hydrological models. Catchment characteristics and their influence on runoff formation. Rainfall as the basic factor determining runoff. IDF formulas. Time of runoff concentration. Global and integrated models for runoff calculations.				
Prerequisites and co-requisites	knowledge of the basic scope of general hydrology				
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade		
and criteria	teoretical test (lecture)	60.0%	50.0%		
	practical test	60.0%	50.0%

example questions/ tasks being completed	Determine the catchment characteristics Calculate the time of concentration of the outflow from the catchment Calculate the amount of rainwater draining from the catchment area using the chosen method. Explain the difference between global and integrated modeling. Assess the computational usefulness of the Błaszczyk formula in the context of other formulas of a similar
	nature.
Work placement	Not applicable
