

Subject card

Subject name and code	Concrete Structures, PG_00044293						
Field of study	Civil Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		blended-learning		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		8.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Andrzej Ambroziak				
	Teachers		dr hab. inż. Andrzej Ambroziak dr hab. inż. Marcin Abramski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	20.0	0.0	0.0	0.0	50
	E-learning hours included: 30.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	50		10.0		140.0	200
Subject objectives	The aim of teaching the subject is to familiarize students with the principles of work of concrete and reinforced concrete structures, to master the methods of calculating and dimensioning advanced engineering structures.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W04] has knowledge on advanced strength of materials, modeling and optimisation of materials and constructions; has knowledge of fundamentals of Finite Element Method and general nonlinear analysis of engineering constructions and systems				[SW3] Assessment of knowledge contained in written work and projects		
	[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements				[SW3] Assessment of knowledge contained in written work and projects		
	[K7_K01] is aware of necessity of professional competences improvement; obeys the professional ethics code				[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills		
	[K7_U01] can evaluate and list any loads acting on constructions				[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		

Subject contents	Concrete (strength characteristics, immediate and rheological deformations, evaluation of the effects of shrinkage and creep). Prestressing steel (strength characteristics, relaxation, corrosion protection). Concepts of prestressing structures, historical outline, classification of prestressed structures. Prestressing techniques, pre-stressed concrete beams, prestressed concrete beams, other technologies. Losses of prestressing force, evaluation of short-term and rheological losses. Design of prestressed and pre-stressed concrete beams in the elastic phase. Examples of the implementation of prestressed structures. Wall beams - shields. Containers for loose materials. Silos, tanks for liquids. Thin-walled coverings, shells, domes and clapboards, hanging roofs.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	0.0%	50.0%
	Exercise and design task	0.0%	50.0%
