

Subject card

Subject name and code	Software Engineering, PG_00053894						
Field of study	Informatics						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Aleksander Jarzębowicz				
	Teachers		dr inż. Aleksander Jarzębowicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	The course is focused on introducing to students the aspects of industrial software development: large systems, compliant to requirements of a specific customer, supporting business goals, providing a required level of quality characteristics, produced and maintained by large developers teams.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W42] Knows and understands, to an advanced extent, architecture, design principles and methods of hardware and software support for local and distributed information systems, including computing systems, databases, computer networks and information applications, as well as the principles of human cooperation with computers and computer-aided teamwork	The student understands the issues of IT systems design (on both architectural and module level), including software reuse and user interface design.	[SW1] Assessment of factual knowledge
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	The student develops analytical and design models of IT system using CASE (Computer Aided Software Engineering) software supporting tools.	[SU1] Assessment of task fulfilment
	[K6_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	The student develops "Vision of IT system" document that includes a critical analysis of the present state of the customer organization as well as basic requirements and restrictions of the planned IT system.	[SU1] Assessment of task fulfilment
	[K6_W06] Knows and understands the basic processes occurring in the life cycle of devices, facilities and systems specific to a given field of study.	The student understands the importance of engineering practices and organisation of teamwork in software projects. Enumerates and describes key areas of software development process. Explains the selection of practices for the specific software project.	[SW1] Assessment of factual knowledge
	[K6_U43] can analyse data and formulate, apply and assess appropriate formal models and algorithms for solving problems in the field of information systems and applications	The student uses Unified Modeling Language to prepare the models of IT systems.	[SU1] Assessment of task fulfilment

Subject contents	<div>1. Introduction</div> <div>2. Scope and subject of software engineering. Essential motivations and concepts.</div> <div>3. Planning and defining scope of software project. Rich Picture.</div> <div>4. Areas of software engineering - an overview</div> <div>5. Conceptual modelling. Languages for modelling and specification.</div> <div>6. Use cases</div> <div>7. Object-oriented analysis using UML</div> <div>8. Modelling of logical system structure: class diagrams</div> <div>9. Modelling of system structure: other structural diagrams</div> <div>10. Modelling system dynamics: sequence and communication diagrams</div> <div>11. Modelling system dynamics: representing object"s state</div> <div>12. System design: system architecture</div> <div>13. System design: high-level design</div> <div>14. System design: class design (low level)</div> <div>15. Foundations of software quality. Metrics of object-oriented design.</div> <div>16. Software reuse</div> <div>17. Classical design patterns</div> <div>18. Other patterns (Internet Applications patterns, analysis patterns, architectural patterns, management patterns)</div> <div>19. Risk and social responsibility related to IT systems</div> <div>20. Requirements engineering: requirements determination</div> <div>21. Requirements engineering: requirements specification</div> <div>22. User interface design: motivations, terms, techniques</div> <div>23. User interface design: Nielsen"s heuristics and examples</div> <div>24. Software testing: terms, place in software development process</div> <div>25. Software testing: techniques (black/white box), levels of testing, managing tests</div> <div>26. Software reviews and inspections</div> <div>27. Software deployment</div> <div>28. Software usage and maintenance</div> <div>29. Configuration management and software evolution</div> <div>30. Classical (waterfall) software lifecycle model</div> <div>31. Non-classical software lifecycles and development processes</div> <div>32. Adjusting development process to particular software project context</div> <div>33. Outline of software project management</div> <div>34. Software development and management methodologies</div> <div>35. Properties of plan-driven and agile development</div> <div>36. CASE tools</div> <div>37. Other tools supporting software engineering</div>		
Prerequisites and co-requisites	Presence during laboratory courses is mandatory. Delivery of all laboratory exercises and positive verification by tutor is required to pass the lab. Delays in delivering exercises affects the assessments. Only students who pass the lab are entitled to write the exam.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	50.0%
	Lab (assignments & tests)	50.0%	50.0%
