

Subject card

Subject name and code	Electrodynamics, PG_00047680						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Microwave and Antenna Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Piotr Kowalczyk				
	Teachers		dr hab. inż. Piotr Kowalczyk dr hab. inż. Rafał Lech				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	3.0		42.0		75
Subject objectives	Presentation of the basic phenomena relating to electrostatic fields, magnetostatic fields and electromagnetic fields taking place in a free space and different media.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U02] can perform tasks related to the field of study in an innovative way as well as solve complex and nontypical problems, applying knowledge of physics, in changing and not fully predictable conditions		Student is able to study the properties of static and electromagnetic fields in various coordinate systems, determine the fields in the interface between different media, calculate the power balance.		[SU4] Assessment of ability to use methods and tools		
	[K6_W02] Knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study		The student knows the laws of electrodynamics, properties of fields in the interface between different media, power balance and electromagnetic waves properties.		[SW1] Assessment of factual knowledge		
Subject contents	<ol style="list-style-type: none"> 1. Mathematical field theory, flux, circulation, curl, divergence, gradient. 2. Spherical and cylindrical coordinate systems. 3. Electrical and magnetical fields, Coulomb's and Lorentz's force laws. 4. Continuous media concept, charge and current densities, charge continuity equation. 5. Maxwell's equations in free space - integral form. 6. Physical interpretation of Maxwell equations. 7. Maxwell's equations in free space - differentia form and formulation for complex amplitudes. 8. Media - classification. Electrical permittivity, magnetic permeability, relaxation time, dielectrics and conductors, Ohm's law. 9. Maxwell's equations in media. 10. Boundary conditions for electric and magnetic fields. Magnetic circuits, electric shielding. 11. Continuity equation for electromagnetic energy - Poynting vector. 12. Maxwell's equations for static case - electrostatic, concept of potential, voltage. 13. Laplace's and Poisson's equations. 14. Magnetostatics Ampere's and Biot-Savart's laws. Vector potential. 15. Plane wave as a solution of Maxwell's equation in free space, parameters of wave motion. 16. Final test. 						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	midterm tests and colloquia	50.0%	100.0%
Recommended reading	Basic literature	<ol style="list-style-type: none"> 1. W. Zieniutycz: Presentation to the lecture, web page of KIMiA. 2. T. Morawski, W. Gwarek: Teoria Pola Elektromagnetycznego (Pola i Fale Elektromagnetyczne), WNT, Warszawa, 1998. 3. P. Kowalczyk, R. Lech, W. Zieniutycz: Podstawy elektromagnetyzmu w zadaniach, skrypt PG 2007. 4. David J. Griffiths: Podstawy elektrodynamiki, PWN, Warszawa, 2001. 	
	Supplementary literature	D. K. Cheng: Fields and waves Electromagnetics, Addison-Wesley Publishing Company, 1983	
	eResources addresses		
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Formulate (in integral form) and discuss Faraday's law of induction. 2. Formulate equation (in integral form) and discuss the continuity equation. 3. Formulate a definition of electric induction vector in the material, in which the electric polarization effects occur. 4. Formulate the boundary conditions at the surface of an ideal conductor. 5. Introduce the concept of the complex dielectric permittivity starting from Ampere's circuital law for complex amplitudes. 		
Work placement	Not applicable
