

Subject card

Subject name and code	Programming of Electronic Systems, PG_00048673						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Kowalewski				
	Teachers		dr inż. Michał Kowalewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Programming of measurement equipment, control of PC interfaces, learning methods of increasing software efficiency (Win32 API, DLL, ODBC), multithread applications design.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	Uses object-oriented programming techniques and MFC library in MS Visual C++ applications. Optimizes applications using preprocessor directives, namespaces, multibit variables, and handling exceptions. Proves skills of low-level programming for Windows with Win32 API. Constructs and uses Dynamic Link Libraries in Windows applications. Programs RS232, USB and GPIB interfaces and controls measurement equipment with use of SCPI language. Integrates applications with database infrastructure with use of ODBC. Realizes multithread applications, by managing threads execution and organizing access to shared resources with use of synchronization objects.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information
	[K7_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Uses object-oriented programming techniques and MFC library in MS Visual C++ applications. Optimizes applications using preprocessor directives, namespaces, multibit variables, and handling exceptions. Proves skills of low-level programming for Windows with Win32 API. Constructs and uses Dynamic Link Libraries in Windows applications. Programs RS232, USB and GPIB interfaces and controls measurement equipment with use of SCPI language. Integrates applications with database infrastructure with use of ODBC. Realizes multithread applications, by managing threads execution and organizing access to shared resources with use of synchronization objects.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
Subject contents	<ol style="list-style-type: none"> 1. Introduction: course outline, course grading 2. Programming for Windows with Win32 API 3. Methods of increasing software efficiency 4. Object-oriented programming 5. Programming in C# 6. Specification, design and usage of Dynamic Link Libraries 7. Programming of communication interfaces 8. Integration of PC-based electronic system with ODBC 9. Methodology of multithread applications design 10. Graphical programming with OpenGL 11. Programming of measurement instrumentation in Linux 12. Programming for Android 		
Prerequisites and co-requisites	Basic programming in C.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Active participation in the lecture	50.0%	10.0%
	Laboratory exercises	50.0%	30.0%
	Test	50.0%	60.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Describe methods of sending and retrieving messages to/from message queue in a Win32 API application? 2. What is the task of a preprocessor and when it is executed? What are the differences between conditional instructions and conditional directives? 3. What is a namespace, how to define it and get access to its members? Give an example. 4. Describe 3 methods of controlling multibit variables. 5. Describe two types of libraries (*.LIB): static, import. What are the differences between implicit and explicit linking when using DLLs? 6. Describe methods of controlling shared resources with use of: critical sections, mutual exclusions and semaphores. 	
Work placement	Not applicable
