|---|--|--|---|-------------------------------------|--|------------|-----|
| Subject name and code                       | Electronic Infosystems, PG_00048674  |  |   |                                     |  |            |     |
| Field of study                              | Electronics and Telecommunications   |  |   |                                     |  |            |     |
| Date of commencement of studies             | February 2023  |  | Academic year of realisation of subject |                                     | 2022/2023  |            |     |
| Education level                             | second-cycle studies   |  | Subject group                           |                                     | Optional subject group<br>Subject group related to scientific research in the field of study |            |     |
| Mode of study                               | Full-time studies  |  | Mode of delivery                        |                                     | at the university  |            |     |
| Year of study                               | 1  |  | Language of instruction                 |                                     | Polish   |            |     |
| Semester of study                           | 1  |  | ECTS credits                            |                                     | 4.0  |            |     |
| Learning profile                            | general academic profile   |  | Assessment form                         |                                     | exam   |            |     |
| Conducting unit                             | Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics                                    |  |   |                                     |  |            |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor   |  | dr inż. Michał Kowalewski               |                                     |  |            |     |
|   | Teachers   |  | dr inż. Michał Kowalewski               |                                     |  |            |     |
| Lesson types and methods of instruction     | Lesson type  | Lecture  | Tutorial                                | Laboratory                          | Project  | Seminar    | SUM |
|   | Number of study hours  | 30.0   | 0.0                                     | 30.0                                | 0.0  | 0.0        | 60  |
|   | E-learning hours included: 0.0   |  |   |                                     |  |            |     |
| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan |   | Participation in consultation hours |  | Self-study | SUM |
|   | Number of study hours  | 60   |   | 8.0                                 |  | 32.0       | 100 |
| Subject objectives                          | Learning principle of operation of different electronic infosystems, covering various industrial and commercial applications of electronics. |  |   |                                     |  |            |     |

|                                 |  |  |  |
|---------------------------------|--|--|--|
| Learning outcomes               | Course outcome   | Subject outcome  | Method of verification   |
|                                 | [K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment  | Student describes and explains the principle of operation of various person and goods identification techniques. Student describes some categories of electronic infosystems, covering various industrial and commercial applications of electronics. Student explains how devices are controlled in a Smart Home. Student describes and explains the principle of operation of neural networks and examples of their hardware implementation.   | [SU4] Assessment of ability to use methods and tools<br>[SU3] Assessment of ability to use knowledge gained from the subject<br>[SU2] Assessment of ability to analyse information |
|                                 | [K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.   | Student describes and explains the principle of operation of micro electro-mechanical systems: acceleration and angular rate sensors, implantable blood pressure sensors, digital compass. Student describes and explains the principle of operation of selected electronic infosystems: automated teller machines, digital autofocus camera, cash registers and fiscal systems and alarm systems. Student demonstrates methods of labeling products with EAN and UPC barcodes. Student analyses the limitations of popular ID techniques. Student explains the basic idea of impedance spectroscopy method and how it is evaluated. | [SW3] Assessment of knowledge contained in written work and projects<br>[SW2] Assessment of knowledge contained in presentation  |
|                                 | K7_K02   | The student critically analyzes the content presented in the course of the subject and is ready to argue over the ways of implementing technical solutions used in electronic infosystems.   | [SK5] Assessment of ability to solve problems that arise in practice   |
| Subject contents                | <ol style="list-style-type: none"> <li>1. Introduction: course outline, course grading.</li> <li>2. Mechatronic systems, basic microsensors and actuators, acceleration and angular rate measurements with use MEMS sensors.</li> <li>3. Biomedical applications of MEMS (implantable blood pressure sensors).</li> <li>4. Digital compass (magnetic field sensors, signal conditioning circuits, construction and usage of digital compass).</li> <li>5. Construction and theory of operation of digital autofocus camera (basic concepts, methods of image recording, construction of camera).</li> <li>6. Automated Teller Machines (Architectures and functional blocks of ATMs (construction of ATM, software, security of ATM systems).</li> <li>7. Fiscal Systems (bar code system, functional modules : bar code scanners, cash registers, sale systems).</li> <li>8. Systems for identification of persons and goods (constant and variable code systems with RF and IR transmission, radio-frequency identification RFID).</li> <li>9. Remote Control System in a Smart Home (Z-Wave Standard, OpenZWave library).</li> <li>10. Control of model railways (H0 standard).</li> <li>11. Touristic navigation systems.</li> <li>12. Usage of neural networks for diagnosis of analog electronic circuits.</li> <li>13. Hardware implementation of neural networks.</li> <li>14. Impedance spectroscopy methods.</li> <li>15. Alarm and fire alarm systems.</li> </ol> |  |  |
| Prerequisites and co-requisites | No requirements  |  |  |
| Assessment methods and criteria | Subject passing criteria   | Passing threshold  | Percentage of the final grade  |
|                                 | Test 1   | 50.0%  | 35.0%  |
|                                 | Test 2   | 50.0%  | 35.0%  |
|                                 | Laboratory exercises   | 50.0%  | 30.0%  |
| Recommended reading             | Basic literature   | Robert H. Bishop: The Mechatronics Handbook, CRC Press LLC 2002.   |  |
|                                 | Supplementary literature   | No requirements  |  |
|                                 | eResources addresses   | Adresy na platformie eNauczanie:   |  |

| <p>Example issues/<br/>example questions/<br/>tasks being completed</p> | <ol style="list-style-type: none"> <li>1. List and shortly discuss functional blocks of a mechatronic system.</li> <li>2. Describe error sources in azimuth calculation in an electronic compass, and how they can be compensated?</li> <li>3. What cryptographic algorithms are used in ATMs, what are their features and how they are combined in PIN encryption and decryption processes?</li> <li>4. How image is captured in CCD and CMOS sensors? Compare properties of both sensors.</li> <li>5. What is the purpose of a barcode scanner? Describe principle of operation of pen, CCD and laser scanners. What are their advantages and disadvantages?</li> <li>6. Draw functional block diagram explaining transmission of code from remote control via RF or IR medium. Describe briefly usage of each block.</li> </ol> |
