

Subject card

Subject name and code	Programming of Real-Time Systems, PG_00048385						
Field of study	Electronics and Telecommunications, Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Marine Electronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jan Schmidt				
	Teachers		dr inż. Jan Schmidt				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	The aim of the course is introducing students with the programming techniques real-time systems.Discussion of issues concerning the development of software in multiprocess, multithreaded systems . Introducing students with the mechanisms of resource sharing in real-time systems. Presentation of the specifics of programming systems based on industry standards VMEbus, cPCI, PC104, PC104-PLUS. Introducing students with the specific programming systems based on DSP processors.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices		The student knows and understands the advanced programming techniques of multi-process and multi-threaded real-time systems and systems based on signal processors.		[SW1] Assessment of factual knowledge		
Subject contents	1. Introduction. Definitions. Basic concepts. 2. Review of real-time operating systems. 3. Real-time systems concepts and elements. 4. Kernel and his environment in RT systems. 5. Processes manager, resources manager, name space management. 6. Memory management in RT systems. 7. Processes and threads. 8. Threads scheduling in RT systems. 9. Threads synchronization methods in RT systems. 10. Inter-process communication in RT systems. 11. Hardware interrupts handling in RT systems. 12. Hardware programmng in RT systems. 13. Communication devices based on VMEBus with environment. 14. Tools support RT systems programming. 15. Application debugging and testing in RT systems.						
Prerequisites and co-requisites							

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	50.0%	30.0%
	Project	50.0%	30.0%
	Midterm colloquium	50.0%	40.0%
