GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Virtualization in Telecommunications Networks, PG_00056860
Field of study	Electronics and Telecommunications
Date of commencement of studies	February 2023	Academic year of realisation of subject	2022/2023
Education level	second-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Teleinformation Networks -> Faculty of Electronics, Telecommunications and Informatics
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marcin Narloch
	Teachers	dr inż. Marcin Narloch

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	15.0	0.0	0.0	30
E-learning hours included: 0.0						

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	4.0	16.0	50

Subject objectives	Learning the methods and solutions used in Network Function Virtualization in telecommunications. Practical study of problems regarding virtualization in telecommunication networks.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems	The student assesses the practical usefulness of known solutions for virtualization of particular network functions.	[SK5] Assessment of ability to solve problems that arise in practice
[K7_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	Student analyses, measures and tests network function virtualization solution including its performance and scalability.	[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information
[K7_U06] can analyse the operation of components, circuits and systems related to the field of study; measure their parameters; examine technical specifications; interpret obtained results and draw conclusions	Student configures parameters of selected virtualization solution for realization of particular network function and modifies their values according to conducted test and measurements.	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Student defines basic notions of the virtualization in telecommunications, characterizes elements of Network Function Virtualization architecture and describes exemplary solutions of Network Function Virtualization realizations.	[SW1] Assessment of factual knowledge

Subject contents	Notion of virtualization in telecommunications and overview of virtual system solutions used in telecommunications.
	Introduction to the concept of Network Functions Virtualization (NFV).
	The reasons and the aim of NFV introduction.
	NFV standardization.
	Basic notions of virtualization.
	NFV architecture elements. Network Functions Virtualization Infrastructure (NFVI).
	Software and hardware mechanisms used in Network Functions Virtualization Infrastructure realization.
	Network functions implemented in the virtual form (Virtualized Network Functions, VNF). Examples of VNF realization in the context of NGN data transport layer and control layer.
	Relation between NFV and Software Defined Networks (SDN).
	NFV MANagement and Orchestration Framework (NFV-MANO).
	Systems, protocols and data structures used in NFV-MANO.
	Evolution of NFV concept in the context of (Cloud-native Network Functions (CNF).
	Container technology (operating system level virtualization) and its influence on NFV in the context of CNF.
	Measurement, testing, performance and scalability of NFV and CNF solutions.
	Detailed description of selected NFV and CNF realization.
Prerequisites and co-requisites	

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	50.0%	60.0%
	Practical exercise	50.0%	40.0%

Recommended reading	Basic literature	Materials prepared by lecturer, made accesible as xerocopy. Manual in the form of xeroxcopy

Example issues/ example questions/ tasks being completed	Configuration and optimization of virtualization system (virtual machine) for software executed in virtual environment. Realization of selected network function in full virtualization environment with hardware extension support. Realization of selected network function in selected virtualization environment on operating system level. Realization of selected network function in selected cloud environment. Realization of management and orchestration of network function virtualization. Automation of virtualization solution deployment in telecommunication.	
Work placement	Not applicable
