

Subject card

Subject name and code	Research project II, E:40373P0							
Field of study								
Date of commencement of studies			Academic year of realisation of subject					
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	1		Language of instruction		Polish			
Semester of study	2		ECTS credits		2.0			
Learning profile	general academic profile		Assessme	Assessment form		assessment		
Conducting unit	Department of Computer Communications -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname	Subject supervisor		dr inż. Krzysztof Nowicki					
of lecturer (lecturers)	Teachers		dr inż. Krzysztof Nowicki					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	roject Sem		SUM
	Number of study hours	0.0	0.0	0.0	30.0		0.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30 5.0		5.0	25.0			60
Subject objectives	The research project meet obligations result from the immediate goal of the research hypothe product, e.g. an appli	of the research sis set by the c	greed schedul project is to ca lient. For this p	le in a timely m arry out works in ourpose, the pro	anner. n which oject ma	the stu	dent or stude ire the impler	ents will verify nentation of a

Learning outcomes	Course outcome	Subject outcome	Method of verification			
	[K7_W09] Knows and understands, to an increased extent, the economic, legal and other conditions of various types of activities related to the given qualification, including the principles of protection of industrial property and copyright.	the student has the knowledge to assess the economic and legal possibilities of project implementation. Is able to analyze data from a research experiment.	[SW1] Assessment of factual knowledge			
	[K7_W07] Knows and understands, to an increased extent, the general principles of creating and developing forms of individual entrepreneurship.	the student has knowledge of the legal and non-legal aspects of individual entrepreneurship	[SW1] Assessment of factual knowledge			
	[K7_U11] can manage team work	the student understands the role of project management, knows and applies the selected method of managing group work, supervising the production of project documentation	[SU1] Assessment of task fulfilment			
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	The student is able to design, in accordance with the given specification, and make a complex device, object, ICT system or implement the ICT process, using appropriately selected methods, techniques, tools and materials, using engineering standards and norms, using ICT technologies and using the experience gained in the environment professionally involved in engineering activities	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment			
	[K7_K01] is ready to create and develop models of proper behaviour in the work and life environment; undertake initiatives; critically evaluate actions of their own, teams and organisations they are part of; lead a group and take responsibility for its actions; responsibly perform professional roles taking into account changing social needs, including:n - developing the achievements of the profession,n- observing and developing rules of professional ethics and acting to comply to these rulesn	the student has the knowledge to develop patterns of proper conduct in the work and living environment, to critically evaluate the groups in which he participates, to lead the group and to properly distribute roles and tasks among group members	[SK5] Assessment of ability to solve problems that arise in practice			
	The client defines the research problem by entering the content of the project into the "Group and research project service" system. If the Client is a WETI employee, the topic should be of a research nature, i.e. contain a research hypothesis for verification. In the case of an external customer, it is allowed to define an application topic consisting in the production of a prototype / product, e.g. a device / application. Depending on the requirements of the external client, the project may require the implementation of an application solution (e.g. an application, a fragment of code) completed in whole or in part, which can be used in a company, organization, institution (i.e. it has the potential for this, has certain functional features, and not only experimental) and optionally includes research elements.					
	The obligatory result of a research project for projects with a research hypothesis is a report in the form of a publication formatted according to the IEEE template, prepared in English. For application projects, a report in the form of a patent application (application) is also allowed. In the case of a report in the form of a publication, the information about the Project Supervisor and his affiliation should be included in the "Acknowledgment" section. Interested Students can prepare, together with the Tutor / ETI staff / other people who participated in the research: 1. A scientific publication prepared in accordance with the editorial requirements of the intended place of publication (journal, conference), using a template, e.g. IEEE, Elsevier, Springer etc. Publication follows the procedures of the publishing house. Co-authors contribute creatively to the publication. 2. Patent application - depending on the requirements - in Polish or English. The report is required to include such elements as: 1. Definition of the problem and research hypothesis. 2. A state-of-the-art section summarizing existing solutions / results in the context of the problem under consideration. 3. Solution proposal. 4. Details of the solution, e.g. algorithm design, implementation, applied optimizations. 5. Experiments and research. Discussion of the results and verification of the research hypothesis. If the project ends with a result that can be used in further research work of the department (including, for example, an application that was used for research, verification of the hypothesis) and if the University and the student express such a will, an agreement is concluded on the transfer of property rights to the results that have been obtained (at the end of the research project). Additional requirements may be formulated for project implementers for an external client.

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	project	50.0%	100.0%			
Recommended reading	Basic literature	materials related to the project being implemented				
	Supplementary literature	Management books				
	eResources addresses	Adresy na platformie eNauczanie:				
		Projekt badawczy 2023/24 - Moodle ID: 34864 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=34864				
Example issues/ example questions/ tasks being completed	Infrared image analysis and segmentation of facial feature elements in thermograms using AI for COVID-19 prevention					
	Implementation of a WBAN radiolocalization system prototype using deep learning algorithms					
	Supporting the safety of people and car intelligence with the use of automatic pedestrian detection in thermal image sequences					
Work placement	Not applicable
