

Subject card

Subject name and code	Modelling of Biological Systems, PG_00040972						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Instytut Fizyki i Informatyki Stosowanej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marta Łabuda				
	Teachers		dr hab. inż. Marta Łabuda				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	30.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Students will be introduced to the definitions and computational methods used to perform of the simulations of the structure and properties of the complex systems of biological interest, from biomolecules, proteins, DNA bases and more complex biological systems. Students will be introduced to the numerical methods used in the description of physical phenomena and understanding of the processes in the biological systems. Students will gain the knowledge of the chosen modelling methods and techniques allowing their use in practise, particularly in biophysics, biochemistry and medicine.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn	The student is aware of applications of chosen methods and apply them in the area of science and medicine. Student can perform simple calculations and simulations by means of the computational packages introduced in the lecture. Student can use the computational tools and interfaces for chosen biological systems. Student can use and search data in the databases and use the internet as a tool for search useful information.	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
	[K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study.	The student is aware of applications of chosen methods and apply them in the area of science and medicine.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
	[K7_K01] is ready to create and develop models of proper behaviour in the work and life environment; undertake initiatives; critically evaluate actions of their own, teams and organisations they are part of; lead a group and take responsibility for its actions; responsibly perform professional roles taking into account changing social needs, including:n - developing the achievements of the profession,n- observing and developing rules of professional ethics and acting to comply to these rulesn	The student knows the theoretical aspects and basic definitions and theorems which concern the molecular physics and quantum mechanical calculations. Student can perform simple calculations by means of the computational packages introduced in the lecture.	[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work
Subject contents	Computer modeling of physical processes taking place in nature. Software packages for studying of the properties of molecules, eg ORCA, MOLPRO. Characteristics, similarities and differences; technical limitations; errors, interpretation and visualization of results. Analysis of molecular dynamics simulation results, incorporation of experimental information into calculations, structures from NMR spectra. Modeling of structure and dynamics in large biological complexes, e.g. DNA. Visualization of structures and chemical properties of biomolecules. The most commonly used graphical interfaces. 3D graphics. The role of modeling methods in the analysis of complex biological systems. Databases of molecular structures. Modeling in medicine as a challenge for computational theories and methodologies. Modeling of physiological systems, e.g. the dynamics of blood flow in the heart muscle. Investigation of the influence of tissue blood supply on temperature stabilization. Nature-inspired computer algorithms. Information processing in the body. The nervous system as a cybernetic system. Neural networks and other artificial intelligence systems for medicine.		
Prerequisites and co-requisites	Interest in mechanisms and processes taking place in biological systems and in modelling tools and methods.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	50.0%	60.0%
	Project presentation	50.0%	40.0%
