

## Subject card

|   |   |  |   |                                     |  |            |     |
|---|---|--|---|-------------------------------------|--|------------|-----|
| Subject name and code                       | Modeling and prediction methods in biomedical processes, PG_00053372  |  |   |                                     |  |            |     |
| Field of study                              | Biomedical Engineering, Biomedical Engineering, Biomedical Engineering  |  |   |                                     |  |            |     |
| Date of commencement of studies             | February 2023   |  | Academic year of realisation of subject   |                                     | 2023/2024  |            |     |
| Education level                             | second-cycle studies  |  | Subject group   |                                     | Optional subject group<br>Subject group related to scientific research in the field of study |            |     |
| Mode of study                               | Full-time studies   |  | Mode of delivery  |                                     | at the university  |            |     |
| Year of study                               | 1   |  | Language of instruction   |                                     | Polish   |            |     |
| Semester of study                           | 2   |  | ECTS credits  |                                     | 3.0  |            |     |
| Learning profile                            | general academic profile  |  | Assessment form   |                                     | assessment   |            |     |
| Conducting unit                             | Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics  |  |   |                                     |  |            |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor  |  | dr inż. Artur Poliński  |                                     |  |            |     |
|   | Teachers  |  | dr inż. Artur Poliński<br><br>dr Tomasz Neumann   |                                     |  |            |     |
| Lesson types and methods of instruction     | Lesson type   | Lecture  | Tutorial  | Laboratory                          | Project  | Seminar    | SUM |
|   | Number of study hours   | 15.0   | 0.0   | 15.0                                | 0.0  | 0.0        | 30  |
|   | E-learning hours included: 0.0  |  |   |                                     |  |            |     |
| Learning activity and number of study hours | Learning activity   | Participation in didactic classes included in study plan |   | Participation in consultation hours |  | Self-study | SUM |
|   | Number of study hours   | 30   |   | 5.0                                 |  | 40.0       | 75  |
| Subject objectives                          | The aim of the course is present the methods of modeling and prediction in biomedical applications  |  |   |                                     |  |            |     |
| Learning outcomes                           | Course outcome  |  | Subject outcome   |                                     | Method of verification   |            |     |
|   | [K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study.  |  | The student has knowledge of modeling and prediction in biomedical applications                               |                                     | [SW1] Assessment of factual knowledge  |            |     |
|   | [K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn |  | The student has knowledge of numerical modeling of processes and signal prediction in biomedical applications |                                     | [SU1] Assessment of task fulfilment  |            |     |
|   | [K7_W02] Knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study            |  | The student has knowledge of modeling and prediction in biomedical applications                               |                                     | [SW1] Assessment of factual knowledge  |            |     |
|   | [K7_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions   |  | Numerical simulations related to modeling and prediction in biomedical applications                           |                                     | [SU1] Assessment of task fulfilment  |            |     |

|                                 |   |  |                               |
|---------------------------------|---|--|-------------------------------|
| Subject contents                | The least squares method (LS). Examples of using the LS in modeling.<br>Examples of phenomena modeled by ordinary differential equations. Numerical solution of ordinary differential equations (Euler and Runge-Kutta methods)<br>Examples of problems modeled by partial differential equations. Numerical solving of partial differential equations by the finite difference method<br>Numerical solving of partial differential equations using the finite element method<br>Numerical solution of partial differential equations by the boundary element method<br>Monte Carlo method and its application in simulation<br>Examples of signal prediction methods<br>Autoregressive models in prediction<br>The use of the finite element method and the boundary element method in modeling.<br>Modeling of the electromagnetic field.<br>Heat transfer modeling.<br>Modeling of acoustic phenomena. |  |                               |
| Prerequisites and co-requisites | Advanced mathematics  |  |                               |
| Assessment methods and criteria | Subject passing criteria  | Passing threshold  | Percentage of the final grade |
|                                 | laboratory  | 51.0%  | 60.0%                         |
|                                 | lecture   | 51.0%  | 40.0%                         |
