

Subject card

| Subject name and code | Discrete Optimisation Algorithms, PG_00048241 | | | | | | | | |
|---|--|--|---|-------------------------------------|-----|---|-----|-----|--|
| Field of study | Informatics | | | | | | | | |
| Date of commencement of studies | February 2023 | | Academic year of realisation of subject | | | 2022/2023 | | | |
| Education level | second-cycle studies | | Subject group | | | Optional subject group Subject group related to scientific research in the field of study | | | |
| Mode of study | Full-time studies | | Mode of delivery | | | at the university | | | |
| Year of study | 1 | | Language of instruction | | | English | | | |
| Semester of study | 1 | | ECTS credits | | | 2.0 | | | |
| Learning profile | general academic profile | | Assessment form | | | exam | | | |
| Conducting unit | Department of Algorithms and Systems Modelling -> Faculty of Electronics, Telecommunications and Informatics | | | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr hab. inż. Michał Małafiejski | | | | | | |
| | Teachers | | mgr inż. Krzysztof Pastuszak | | | | | | |
| | | | dr hab. inż. Michał Małafiejski | | | | | | |
| | | | Petros Petrosyan | | | | | | |
| Lesson types and methods of instruction | Lesson type Lecture | | Tutorial Laboratory Project | | t | Seminar | SUM | | |
| | Number of study hours | 15.0 | 0.0 | 15.0 | 0.0 | | 0.0 | 30 | |
| | E-learning hours included: 0.0 | | | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation i classes including plan | | Participation in consultation hours | | Self-study | | SUM | |
| | Number of study hours | 30 | | 4.0 | | 16.0 | | 50 | |
| Subject objectives | Introduction to the methods of the construction of approximation algorithms to the computationally hard problems. The ability to prove guaranteed approximation ratios of algorithms for selected optimization problems. The construction of approximation schemes using pseudo-polynomial time algorithms based on dynamic programming. Overview of the significant problems of discrete optimization. | | | | | | | | |
| | | | | | | | | | |

| Learning outcomes | Course outcome | Subject outcome | Method of verification | | | |
|--|--|--|---|--|--|--|
| | [K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study. | Student examines and analyzes the quality of the approximate algorithms. | [SW2] Assessment of knowledge contained in presentation | | | |
| | [K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn | Student analyzes real-world problems using discrete mathematical models. | [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment | | | |
| | [K7_U41] can select methods of modelling and analysis of information systems and applications using selected elements of theoretical computer science and modern programming tools | Student identifies methods of designing algorithms. Student applies the method of construction fulfilment of the approximate algorithms. | [SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment | | | |
| | [K7_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices | Student is able to find or construct by himself an efficient approximation algorithm for the proposed model. | [SW3] Assessment of knowledge contained in written work and projects | | | |
| | [K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems | The student conducts a methodological analysis of the possibilities of solving discrete optimization problems. | [SK5] Assessment of ability to solve problems that arise in practice | | | |
| Subject contents | 1. Rules of grading 2. Methods of designing of algorithms 3. K-approximation algorithms 4. Approximation schemes 5. Approximation scheme for knapsack problem 6. PSPACE-complete problems 7. Approximation algorithms for k-center problem 8. Approximation algorithms for covering problems 9. Layering algorithm for Vertex Cover 10. Greedy algorithms for shortest superstring problem 11. 4- and 3-approximation algorithms for shortest superstring problem 12. Approximation algorithms for Steiner Tree problem 13. Approximation algorithms for TSP 14. Approximation algorithms for scheduling problems 15. Construction of algorithms based on linear programming | | | | | |
| Prerequisites and co-requisites | | | | | | |
| Assessment methods | Subject passing criteria | Passing threshold | Percentage of the final grade | | | |
| and criteria | Exam | 50.0% | 100.0% | | | |
| Recommended reading | Basic literature | Vazirani, Vijay V. "Approximation Algorithms" Wilson Robin J. "Introduction to Graph Theory" | | | | |
| | | Christos H. Papadimitriou "Computational Complexity" | | | | |
| | Supplementary literature | No requirements | | | | |
| | eResources addresses Adresy na platformie eNauczanie: | | | | | |
| Example issues/ example questions/ tasks being completed | - | , , | | | | |
| Work placement | Not applicable | | | | | |
