

Subject card

Subject name and code	Information Systems Evolution Management, PG_00048283						
Field of study	Informatics, Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Andrzej Wardziński				
	Teachers		dr inż. Andrzej Wardziński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	The goal of this course is to develop understanding of the role and scope of the processes of information systems evolution, to acquire knowledge of the methods and techniques of IT systems operational management, their modifications, integration, migration, support services and continuity management						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	The student knows the properties of system architectures and their components and is able to apply them to ensure ease of evolution, maintenance and scalability	[SW1] Assessment of factual knowledge
	[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can:n- apply analytical, simulation and experimental methods,n- notice their systemic and non-technical aspects,n- make a preliminary economic assessment of suggested solutions and engineering workn	The student can analyze the processes of information system change management, business continuity and service level including aspects of business processes, organization, location, data, applications and infrastructure.	[SU1] Assessment of task fulfilment
	[K7_W41] Knows and understands, to an increased extent, the standards, production methods, life cycle and development trends of software as well as information systems and applications.	The student knows and understands the main processes of system evolution management (ITIL) and evolutionary software development processes (SCRUM).	[SW1] Assessment of factual knowledge
	[K7_U42] can solve engineering and research problems including design, assessment and maintenance of information systems and applications, using experimental methods and management techniques	The student can plan the work the information system change management and assurance of service level and business continuity.	[SU1] Assessment of task fulfilment
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems	The student can analyze the system architecture in terms of ease of evolution and scalability	[SK5] Assessment of ability to solve problems that arise in practice

Subject contents	Lecture		
	The scope of the lectures includes: - Information systems evolution process - software quality and maintainability - Change analysis and management - Architecture and design patterns - Data quality - Configuration and release management, Continuous integration - Quality assurance, software code quality - Evolutionary software development model - Agile methodologies, XP, SCRUM - IT services management, ITIL, DevOps Student project During this project students work in groups. Groups receive a task requiring analysis in the areas like system changes (integration, migration), or management of system continuity or service level. The aim of the project is to use the knowledge acquired during the course to analyze the problem for a particular information system and determine organizational and technical solutions.		
Prerequisites and co-requisites	No prerequisites		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Theory	50.0%	50.0%
	Project	50.0%	50.0%
