

Subject card

Subject name and code	Graph Algorithms, PG_00048245						
Field of study	Informatics						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Algorithms and Systems Modelling -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Dariusz Dereniowski					
	Teachers	prof. dr hab. inż. Dariusz Dereniowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	15.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	6.0		39.0	75	
Subject objectives	The aim of the course is learning skills in the area of analysis of graph algorithms. The analysis covers basic methods of algorithms design shown in selected examples.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U41] can select methods of modelling and analysis of information systems and applications using selected elements of theoretical computer science and modern programming tools	Student learns examples of using graph-theoretic methods for modeling exemplary systems.	[SU4] Assessment of ability to use methods and tools
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn	Student learns to use the tools he or she learned to apply them in an analysis of a selected problem.	[SU5] Assessment of ability to present the results of task
	[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can:n- apply analytical, simulation and experimental methods,n- notice their systemic and non-technical aspects,n-make a preliminary economic assessment of suggested solutions and engineering workn	Student uses selected tools during analysis of a given problem regarding graph algorithms.	[SU5] Assessment of ability to present the results of task
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.	Student learns methods of modeling selected systems.	[SW2] Assessment of knowledge contained in presentation
[K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study.	Student learns mathematical tools for analysis of graph algorithms.	[SW1] Assessment of factual knowledge	
Subject contents	<p>Introduction</p> <p>Introduction to graph theory</p> <p>Search algorithms in graphs</p> <p>Algorithms related to paths and trees</p> <p>Basic properties of complex networks</p> <p>Parameters in complex networks</p> <p>Introduction to the graph coloring problem - definitions, models and applications</p> <p>Generalization of the graph coloring problem</p> <p>Some graph coloring algorithms</p>		
Prerequisites and co-requisites	Basic knowledge in the are of graph theory, discrete mathematics, foundations of analysis of algorithms and computational complexity.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	50.0%	40.0%
	Seminar	50.0%	60.0%

Recommended reading	Basic literature	T.H. Cormen, C.E. Leiserson, R.L. Rivest, Introduction to algorithms R.J. Wilson, Introduction to graph theory M.M. Sysło, N. Deo, J.S. Kowalik, Algorytmy optymalizacji dyskretnej, PWN M.Kubale (Ed.), Graph colorings, AMS
	Supplementary literature	None.
