

Subject card

Subject name and code	Advanced Architectures of Neural Networks, PG_00054194						
Field of study	Informatics						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Computer Architecture -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jan Cychnerski				
	Teachers		mgr inż. Karol Draszawka				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	30.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		28.0	75
Subject objectives	The aim of the course is to provide students with knowledge and skills regarding the construction, training and application of advanced deep artificial neural networks, such as, for example, multimodal networks, multi-output networks, modern deep convolution networks, transformer networks, etc. After completing the course, the student should have extensive knowledge on this subject and be able to build, learn and apply (using appropriate tools and frameworks) this type of neural network to solve a selected practical problem.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	Ability to build and train advanced neural networks using frameworks such as Tensorflow or Pytorch.	[SU4] Assessment of ability to use methods and tools
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	The ability to design, implement and train a deep neural network, which is a key element of a system dedicated to solving a selected problem.	[SU1] Assessment of task fulfilment
	[K7_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	The ability to conduct experiments with the use of deep neural networks, including searching the space of network learning hyperparameters.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn	The ability to analyze a selected problem related to machine learning and design the proper architecture of a neural network and the method of training this network in order to solve the problem.	[SU3] Assessment of ability to use knowledge gained from the subject
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Knowledge of the construction and applications of architecturally advanced deep neural networks.	[SW1] Assessment of factual knowledge
Subject contents	<ul style="list-style-type: none"> • Federated learning • Neural network as a computational graph - building blocks and basic mechanisms - implementations • Multi-input and multi-output models (multi-modal and multitasking) • Multi-gpu (model-parallelism) models • Breakthrough convolutional network architectures (AlexNet, InceptionNet, ResNet, DenseNet ...) • Normalization layers (Batch Normalization, Layer Normalization ...) • Light architectures (e.g. MobileNets, ShuffleNet, EfficientNet, GhostNet, TinyNet) • Sequence processing and recursive networks in the basic variant and LSTM and GRU • Attention mechanisms and the Transformer architecture • Transformer applications (e.g. ELMo, BERT, GPT) 		
Prerequisites and co-requisites	<ul style="list-style-type: none"> • Basic linear algebra (vector and matrix operations) • Ability to program in Python 		

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	50.0%	50.0%
	Written multiple choice test	50.0%	50.0%
