

Subject card

Subject name and code	Media Processing in Decision-Making Systems, PG_00054192						
Field of study	Informatics						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Multimedia Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Andrzej Czyżewski				
	Teachers		dr hab. inż. Piotr Szczuko				
			dr inż. Arkadiusz Harasimiuk				
			mgr inż. Szymon Zaporowski				
			dr inż. Sebastian Cygert				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		28.0	75
Subject objectives	The aim of the lecture is to illustrate the potential applications of machine learning, in particular the ability to adaptively learn, interpret possible variants of objects or patterns, e.g. scale, orientation and perspective in the field of multimedia technologies with particular emphasis on processing sounds, images and noisy data. Among the applications, object detection, autonomous vehicles, biometrics and medicine in particular will be discussed and illustrated by laboratory exercises.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W42] Knows and understands, to an increased extent, the principles and trends in the analysis and design of local and distributed IT systems and the basics of computer modeling and computerization of complex cognitive and decision-making processes.	Is familiar with cloud approaches, how to create and organize machine learning and artificial intelligence services. Is able to model objects in an image. Is familiar with the concepts of segmentation, region of interest determination. Knows basic techniques for analyzing multimodal medical, biometric data and understands information analysis methods used for vehicle autonomization.	[SW1] Assessment of factual knowledge
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Can apply boosted decision trees, and train neural networks using multimedia data. Knows the design principles of systems that collect, analyze, process and recognize multimedia data. Distinguishes between machine learning methods and in particular neural networks used for multimedia data processing.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	[K7_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	Able to refer to scientific sources in the field of contemporary methods and technologies, as well as to propose trends in the development of methods and principles of multimedia data acquisition and their use in machine learning, modifying them appropriately, if necessary, in the course of engineering projects, and applying appropriate security rules for access to the data used.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	[K7_W02] Knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study	Possesses extended knowledge of algorithms for learning distance metrics, learning in computer vision, knows the specific phenomena occurring in the recognition of sounds and images, understands the impact of noise on the effectiveness of their analysis and processing .	[SW1] Assessment of factual knowledge
Subject contents	<p>Lectures: 1 Reinforcement decision trees in applications 2 Overview of algorithms that learn distance metrics 3 Multitasking learning in computer vision 4 Object detection (object detection, keypoints detection, 3D detection). Applications in autonomous vehicles and/or medicine. 5 Semantic segmentation (semantic segmentation, instance segmentation). Applications in autonomous vehicles and / or in medicine. 6 IoT as a data source for ML/AI 7 ML/AI in cloud approach, ML/AI services offered by vendors 8 Practical aspects of using machine learning algorithms (criticism of modern machine learning algorithms, examples of wrong predictions, safety in AI) 9 ML/AI in the automotive area, use of multimedia information sources for autonomization of vehicles - cars and agro equipment. 10 Applications of machine learning in biometrics</p> <p>Labs 1 Discussion of lab principles, practices used, data sources, tools 2 Reinforcement decision trees in applications 3 Algorithms learning distance metrics 4 Multitasking learning in computer vision 5 Object detection (object detection, keypoints detection, 3D detection). Applications in autonomous vehicles. 6 Semantic segmentation (semantic segmentation, instance segmentation). Applications in medicine. 7 Interpretability of artificial intelligence methods. Decision visualization methods for neural networks. 9 ML/AI in cloud approach, ML/AI services offered by vendors 10 Applications of machine learning in biometrics</p> <p>Translated with www.DeepL.com/Translator (free version)</p>		

Prerequisites and co-requisites	The student should have knowledge of data preparation in machine learning, ought to know and distinguish artificial intelligence methods, have practical experience in using tools that enable training neural networks.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	laboratory units	90.0%	50.0%
	lecture	60.0%	50.0%

		eResources addresses	Adresy na platformie eNauczanie: Przetwarzanie multimediów w systemach decyzyjnych 2023 - Moodle ID: 33082 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=33082
Example issues/ example questions/ tasks being completed	Describe the principle of reinforcement decision trees. List and briefly characterize the distance learning metrics algorithms you know. Describe the steps of object detection in an image. List the steps required to develop an automatic segmentation algorithm for applications in autonomous vehicles. Describe a multimodal biometric system based on intelligent analysis of biometric data. Draw and describe a diagram of a cloud-based medical data acquisition and intelligent processing system.		
Work placement	Not applicable
