

## Subject card

Subject name and code	Numerical modelling in biomedical engineering, PG_00057492						
Field of study	Mechanical and Medical Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Katedra Wytrzymałości Materiałów -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Wojciech Witkowski					
	Teachers	prof. dr hab. inż. Wojciech Witkowski dr inż. Karol Daszkiewicz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	30.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	10.0		55.0	125	
Subject objectives	Introduction to finite element method modelling of selected anatomical structures						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_U04] He/she can use programming-communicative techniques concerning to the scope of engineering tasks	student is able to define correctly the model in the FEM environment, student can carry out advanced analytics numerical analysis of selected anatomical structures in the nonlinear range and at a basic level is able to apply computational techniques together with the critical analysis of the results of calculations			[SU1] Assessment of task fulfilment		
	[K7_K01] He/she is aware to acquire the knowledge through the whole life, is able to inspire and to organize to teach himself/herself and others in cooperation and in leading position	The student is aware of the importance of lifelong learning, can inspire and manage the process of teaching and self-teaching, the group co-operating, playing different group roles			[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_W08] He/she broad knowledge related to understand social, economic, legal, ecological and other outer techniques conditions of engineering activities in mechanical-medical engineering	The student is given the enhanced fundamentals necessary to understand the social, economic, legal, ecological and other, non-technical needs in engineering activity in mechanical-medical engineering			[SW1] Assessment of factual knowledge		
	[K7_U06] He/she uses analytical engineering, numerical and experimental methods to state and solve the tasks	student is able to use advanced FEM codes			[SU1] Assessment of task fulfilment		
Subject contents	Introduction to nonlinear continuum mechanics. Selected problems in nonlinear finite element method (FEM) modeling. Selected problems of constitutive relations in biomechanics. Presentation of finite element method biomechanical models in commercial FEM systems. Case studies in FEM modelling and in imaging of anatomical structures of human body						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	0.0%	50.0%
	Lecture	0.0%	50.0%
Recommended reading	Basic literature	FEBio Theory Manual FEBio User Manual	
	Supplementary literature	RAKOWSKI G., KACPRZYK Z.: Metody elementów skończonych w mechanice konstrukcji. Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 1993
