

Subject card

Subject name and code	Numerical modelling in biomedical engineering, PG_00057492						
Field of study	Mechanical and Medical Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Katedra Wytrzymałości Materiałów -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Wojciech Witkowski				
	Teachers		prof. dr hab. inż. Wojciech Witkowski dr inż. Karol Daszkiewicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	30.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		55.0	125
Subject objectives	Introduction to finite element method modelling of selected anatomical structures						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U04] He/she can use programming-communicative techniques concerning to the scope of engineering tasks		student is able to define correctly the model in the FEM environment, student can carry out advanced analytics numerical analysis of selected anatomical structures in the nonlinear range and at a basic level is able to apply computational techniques together with the critical analysis of the results of calculations		[SU1] Assessment of task fulfilment		
	[K7_K01] He/she is aware to acquire the knowledge through the whole life, is able to inspire and to organize to teach himself/herself and others in cooperation and in leading position		The student is aware of the importance of lifelong learning, can inspire and manage the process of teaching and self-teaching, the group co-operating, playing different group roles		[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_W08] He/she broad knowledge related to understand social, economic, legal, ecological and other outer techniques conditions of engineering activities in mechanical-medical engineering		The student is given the enhanced fundamentals necessary to understand the social, economic, legal, ecological and other, non-technical needs in engineering activity in mechanical-medical engineering		[SW1] Assessment of factual knowledge		
	[K7_U06] He/she uses analytical engineering, numerical and experimental methods to state and solve the tasks		student is able to use advanced FEM codes		[SU1] Assessment of task fulfilment		
Subject contents	Introduction to nonlinear continuum mechanics. Selected problems in nonlinear finite element method (FEM) modeling. Selected problems of constitutive relations in biomechanics. Presentation of finite element method biomechanical models in commercial FEM systems. Case studies in FEM modelling and in imaging of anatomical structures of human body						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	0.0%	50.0%
	Lecture	0.0%	50.0%
Recommended reading	Basic literature	FEBio Theory Manual FEBio User Manual
