|   | E-learning hours included: 0.0   |  |  |            |   |   |         |     |  |
| Learning activity and number of study hours | Learning activity  | Participation in<br>classes include<br>plan  |  |            | Self-study SUM  |   |         |     |  |
|   | Number of study hours  | 45   |  | 10.0       |   | 45.0  |         | 100 |  |
| Subject objectives                          | Repetition and consolidation of knowledge on the design of mechanical machines and devices, with particular emphasis on factors typical for medical and rehabilitation equipment. The lecture includes a review of the most important information on the basics of designing and calculating mechanical structures, joints and the selection of typical elements of catalog machine parts. In addition, design aspects that affect the specificity of medical devices will be discussed in an extended way. Design projects of medical evices made by students will help in deeper understanding of new problems |  |  |            |   |   |         |     |  |
| Learning outcomes                           | Course out   | Subject outcome  |  |            | Method of verification  |   |         |     |  |
|   | [K7_K03] He/she can analyze and realize given tasks proposing entrepreneur and creative activities   |  | In the design process, the student identifies and formulates practical engineering tasks aimed at solving a technical problem and makes a critical analysis of the existing solutions.   |            |   | [SK2] Assessment of progress of<br>work<br>[SK5] Assessment of ability to<br>solve problems that arise in<br>practice |         |     |  |
|   | [K7_U07] He/she can see<br>systematic and outer technique<br>aspects while stating and solving<br>the tasks  |  | In the design process, the student takes into account non-technical aspects, such as ergonomics and aesthetics of devices as well as system aspects  |            |   | [SU1] Assessment of task fulfilment   |         |     |  |
|   | that can be used to apply devices.<br>He/she is able to make a<br>preliminary economic analysis  |  | In the design process, the student takes into account non-technical aspects, such as ergonomics and aesthetics of devices with the use of appropriate materials. The student is able to estimate which manufacturing technology will be the best for the proposed structure. |            |   | [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment                                |         |     |  |
|   | [K7_U06] He/she uses analytical engineering, numerical and experimental methods to state and solve the tasks   |  | In the design process, the student uses analytical and computer methods to formulate and solve engineering tasks.  |            | [SU4] Assessment of ability to<br>use methods and tools<br>[SU1] Assessment of task<br>fulfilment |   |         |     |  |
