GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Mechanics of materials and biomaterials, PG_00057486		
Field of study	Mechanical and Medical Engineering		
Date of commencement of studies	February 2023	Academic year of realisation of subject	2022/2023
Education level	second-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	4.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Zakład Mechaniki Stosowanej i Biomechaniki -> Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Wiktoria Wojnicz	
	Teachers	dr inż. Alicja Stanisławska dr hab. inż. Wiktoria Wojnicz	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	0.0	15.0	0.0	0.0	45

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	10.0	45.0	100

Subject objectives: Acquiring knowledge and skills of solving advanced problems of mechanics of materials and biomaterials

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_K02] He/she understands outer aspects of influence of mechanical engineer and manager, their social consequences and impact on the environment, needs to follow the rules of ethics and respect for the diversities of views and cultures	The student defines the strategy to solve the problem belonging to the mechanical-medical scope by considering social and ecological factors	[SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work
[K7_W06] He/she in-depth knowledge related to construct, design and build of mechanical devices and mechanical-medical devices	To solve a given problem the student derive a solution by considering knowledge related to the construction and design of mechanical – medical devices.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
[K7_K01] He/she is aware to acquire the knowledge through the whole life, is able to inspire and to organize to teach himself/herself and others in cooperation and in leading position	The student defines the strategy to acquire needed additional knowledge that allows him to solve basic scientific problem	[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice

Subject contents	**Lectures (DSc PhD Wiktoria Wojnicz) (30h):** Tensor calculation fundamentals. Fundamentals of elasticity theory: 3D stress state, Navier equation, boundary task in stress state and in the displacement state. Fundamentals of elasticity theory; 3D strain state, constitutive relations. Analysis of strain state by using strain gauge systems. Deformable body mechanics: strain tensors. Material models: orthotropic materials. Modele materiałowe: modele stosowane do opisywania biomateriałów (w tym miękkich). Fundamentals of composite materials modelling. Finite Element Method (FEM) in engineering calculations: fundamental definitions. FEM: Truss element, Beam element, Membrane element. Podstawy teorii plastyczności . Wytrzymałość prętów sprężysto-plastycznych. Fatigue strength. Fracture mechanics. Contact stress. Fundamentals of rheology. Thin-walled structure in engineering calculations. Centre of shear estimation. **Lab (PhD Alicja Stanisławska) (15h):** Estimation of hardness, reduced Youngs modulus, yielding strength and elastic strength in nanoindentation test. Estimation of type and value of internal stress in tested material. Fracture mechanics. Assessment of stress intensity factor. Testing of strain rate during the creep of material. Testing of hardness by using Brinell, Rockwell and Vickers methods. Testing of impact strength of metallic sample coved by the oxygen layer.
