Unconventional and aggregate methods of machine parts manufacturing including incremental methods ar reverse engineering.						I methods and			
Course outcome		Subject outcome			Method of verification				
[K7_U06] when solving engineering problems on design, technology and operation of machines is able to assess and classify typical methods and tools, define systemic and ex-technical aspects using modern calculating methods and design tools or modifying the current ones		The student applies modern calculation and design methods when solving engineering tasks. The student selects a processing method for unconventional materials and specific features of the designed part.			[SU1] Assessment of task fulfilment				
profound knowledge necessary for designing and optimization of complex technological processes, modelling and calculations using numerical methods, knows modern manufacturing methods and tools for designing manufacturing processes of machines, devices, their elements and components [K7_U07] is able to perform a preliminary economic analysis of the undertaken engineering		knowledge of unconventional processing methods, in particular special materials. The student has knowledge necessary to design unconventional manufacturing processes as well as parameters used in them. The student is aware of the costs of unconventional processes and their cost-effectiveness in relation			[SW1] Assessment of factual knowledge [SU2] Assessment of ability to analyse information

Subject contents	Lecture Introduction, systematics of modern manufacturing technologies. Incremental technologies, HSC/ HSM machining. Characteristics of HSC/HSM, dry machining. Precision and ultra-precision machining. Machining centres, structure, principles of creation, equipment, changeable machining canters. Chemical machining, milling, etching. Electrochemical machining, electrochemical grinding, electro-discharge machining, wire electro-discharge machining. Laser and electron beam machining. Laboratory Exercises Incremental technologies, general knowledge, programming of devices on the example of Stereolithography, principles of designing supporting elements, postprocessing data format and model resolution, reverse engineering and object analysis, parameterization of typical structural elements.					
Prerequisites and co-requisites	Taking a course in Basic Manufacturing Techniques and Metrology.					
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade			
	Project	60.0%	50.0%			
	Test	60.0%	50.0%
