GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Robotics, PG_00057380						
Field of study	Mechanical Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study		
					Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		English		
Semester of study	1		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Mazur				
	Teachers		dr inż. Michał Mazur				
			dr inż. Wiktor Sieklicki				

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	4.0	16.0	50

Subject objectives	Expanding knowledge about robots and manipulators. Some specific issues relating to the actors, sensors and control systems.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U05] is able to plan and conduct the experimental research determining the parameters of a device or system, assesses the usability and correctly selects methods and tools, is able to interpret the results and estimate the measurement errors and is able to apply computer systems to simulate the operation of a machine or technology	Students analyze the knowledge contained in scientific publications in order to solve the problems posed to them.	[SU2] Assessment of ability to analyse information
	[K7_W05] possesses profound knowledge on the operation of complex systems and mechanical devices, including process equipment	Students know how robots work.	[SW3] Assessment of knowledge contained in written work and projects
	[K7_W06] possesses organized, profound knowledge necessary for designing and optimization of complex technological processes, modelling and calculations using numerical methods, knows modern manufacturing methods and tools for designing manufacturing processes of machines, devices, their elements and components	Students have theoretically founded knowledge related to the field of robots.	[SW3] Assessment of knowledge contained in written work and projects

Subject contents	LECTURE: 1 Introduction 2 Modern trends in the development of two industrial robots 3 Sensors 4 Signal Conditioning 5 Tactile and haptic sensors 6 Methods of localization of mobile robots 7 Effectors 8 Elements of power supply systems 9 Drive chain elements used in robots 10 Tools for robot programming and simulation Laboratory: 1 Programming a movement of an industrail robot 2 Bioloid 3 LEGO NXT
Prerequisites and co-requisites	Basics of mathematics, mechanics and automation, the ability to program engineering calculations.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Laboratory report	50.0%	40.0%
Midterm colloquium	50.0%	60.0%

eResources addresses	Adresy na platformie eNauczanie: Robotics, WL, IDE, II st., sem. 1, letni 2022/23 (PG_00057380) - Moodle ID: 30128 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=30128

Example issues/ example questions/ tasks being completed	What is a sensor? Advantages and disadvantages of digital sensors? Advantages and disadvantages of analog sensors? Discuss conditioning. Haptic systems.Robots development trends. Advantages and disadvantages of ultrasonic sensors for distance measurement. List the location methods. Techniques for measuring distance. Advantages and disadvantages of monolithic architecture. Advantages and disadvantages of distributed architecture. Robust programming - fault detection techniques. Application of real-time systems in robot control. What is SLAM? What do we use quaternions for? Discuss Spherical Linear Interpolation Applications of dual quaternions. What is ROS? Discuss MoveIT Discuss 2D Navigation in a ROS environment Discuss the control of the qaudrocopeter What is Zero Moment Point?
Work placement	Not applicable
