

Subject card

Subject name and code	Planning of experiments and error analysis, PG_00057374						
Field of study	Mechanical Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		English		
Semester of study	1		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Paweł Dąbrowski				
	Teachers		dr inż. Paweł Dąbrowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		6.0		14.0	50
Subject objectives	The subject aims to familiarize students with the idea of experimental work, from planning the experiment, through the acquisition and interpretation of measurement data, to drawing conclusions based on them. In addition, the subject aims to familiarize students with the importance of measurement uncertainty in experimental research as well as to show good practices in conducting experimental work. This subject will teach the student how to plan and run an experiment, and how to interpret the data and compare it with scientific theories, taking into account measurement uncertainty.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U05] is able to plan and conduct the experimental research determining the parameters of a device or system, assesses the usability and correctly selects methods and tools, is able to interpret the results and estimate the measurement errors and is able to apply computer systems to simulate the operation of a machine or technology		The ability to design an experiment in the field of machinery and equipment or technology and theoretical results elaboration, using a variety of techniques and tools, including the calculation of measurement uncertainty		[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K7_W01] possesses a profound mathematical knowledge useful in the analysis and description of the operation of complex mechanical systems, technological processes and operating properties of machines and devices; is familiar with the main development trends		The ability to experimental data curation using mathematical and statistical analysis		[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
	[K7_W07] possesses profound knowledge on the diagnostics and monitoring of the condition of devices, assemblies and technical systems, as well as measurement methods of process and operation control		The ability to design and carry out experimental work based on measurements of physical quantities and their curation, enabling diagnostics and monitoring of the machines and devices operation		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		

Subject contents	<div>1. Basic concepts</div> <div>2. Experiment in historical and philosophical perspective</div> <div>3. Examples of simple experiments</div> <div>4. Basics of experiment design</div> <div>5. Input, output, control, dependent, and independent variables</div> <div>6. Qualitative and quantitative measurements</div> <div>7. Uncertainties and measurement errors</div> <div>8. Acquisition of measurement data</div> <div>9. Statistical analysis of measurement data</div> <div>10. Utilization of measurement data for calculations</div> <div>11. Numerical methods as an experiment aiding tools</div> <div>12. Good practices in designing and conducting experimental research</div> <div>13. Designing and conducting an experiment - a case study</div>		
Prerequisites and co-requisites	Knowledge of basic mathematical concepts with particular emphasis on the concepts of mathematical statistics. Basic knowledge of machine construction, thermal-flow and material strength measurements.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture - writing assessment	60.0%	60.0%
	Tutorial - writing assessment	60.0%	40.0%
