

## Subject card

Subject name and code	Process apparatus in environmental protection, PG_00057389						
Field of study	Mechanical Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Energy and Industrial Apparatus -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Bartosz Dawidowicz				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Teaching the basics of construction and calculation of typical devices from process equipment used in environmental protection. An indication of the specificity of devices in this application.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W03] possesses a profound knowledge on thermodynamic processes and their simulation, knows simulation methods and programs aiding the design and operation of power generating machines and process equipment, including renewable energy sources, air conditioning and cooling		The student is able to make a project and make calculations of basic process apparatus.		[SW3] Assessment of knowledge contained in written work and projects		
	renewable energy sources, air conditioning and cooling						
	[K7_U07] is able to perform a preliminary economic analysis of the undertaken engineering actions within the range of design, production and operation of machines and technical devices		Can assess the value and operating costs of devices		[SU4] Assessment of ability to use methods and tools		
Subject contents	[K7_W05] possesses profound knowledge on the operation of complex systems and mechanical devices, including process equipment		The student knows technical solutions that can be used in technical calculations and projects.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	Lecture. Selected issues of process equipment, including REACTORS. General concepts, classification, their place in environmental protection. Technological operations carried out in reactors: mixing, air injection, circulation of the reactor contents. Periodic and flow reactors. Ideal and real reactors. Dynamic characteristics. Cascade. Types of flows in reactors. Aeration systems. Construction of diffusers. Mixing power, examples of mixers used in reactors. . Construction of absorbers. TANKS FOR WASTEWATER. Construction. Basics of calculations. Apparatus used for secondary and subsequent treatment of sewage. SEALS. Stabilization. Thickening. Drainage. Basics of device construction. Other examples of process equipment in environmental protection. DESIGN. Selected issues in the design of apparatus, eg: the basics and methods of dimensioning the treatment plant. Selected processes in environmental protection						

Prerequisites and co-requisites	basics of physics, chemistry, fluid mechanics and wastewater treatment		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Grade of the project	56.0%	50.0%
	Exam from the lecture	56.0%	50.0%
