

Subject card

Subject name and code	Safety and risk in transportation systems, PG_00057094						
Field of study	Transport and Logistics						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Zakład Projektowania Okrętu -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jakub Montewka				
	Teachers		dr Ievgen Medvediev mgr inż. Izabela Szwoch				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		9.0		46.0	100
Subject objectives	<p>The objective of this course is to get the students acquainted with the foundations of risk analysis as a scientific discipline, along with the practical approaches to risk analysis as a task in a context of risk-informed decision making process.</p> <p>The students will be acquainted with the Quantitative Risk Assessment (QRA), HazId tools, risk-informed decision making, human reliability analysis techniques (HRA), basic tools for QRA such as Bayesian Belief Network, Fault Tree or Event Tree.</p>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W06] The student has an extensive knowledge of transport systems and the principles of transport systems integration	N/A	[SW1] Assessment of factual knowledge
	[K7_W05] The student has extensive knowledge of law, economics and transport management	N/A	[SW1] Assessment of factual knowledge
	[K7_K82] is equipped to participate actively in lectures, seminars and laboratory classes conducted in foreign language	N/A	[SK1] Assessment of group work skills
	[K7_U04] The student is able to use the known methods and mathematical models, as well as computer simulations to analyze, design and evaluate the functioning of transport systems or their components	The student is able to determine the scope of knowledge necessary to carry out the risk analysis of a simplified anthropotechnical system and indicate the source of this data, including mathematical mathematical models and computer simulations.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
	[K7_W03] The student has extensive knowledge of: reliability and safety of transport systems and environmental protection in transport	The student knows the issues related to risk analysis. He is able to formulate a scientific problem related to risk analysis and propose its solution at a certain level of generality. The student is able to carry out a risk analysis for a simple anthropotechnic system.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
Subject contents	1. Teoretical foundations of risk analysis. 2. Quantitative risk analysis, Hazard identification. 3. Human Reliability Assessment techniques. 4. Bayesian Networks, Fault Tree, Event Tree. 5. Safety assessment methods.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture pass	51.0%	50.0%
	Assignment pass	51.0%	50.0%
