

## SDAŃSK UNIVERSITY 的 OF TECHNOLOGY

## Subject card

Subject name and code	Theory of mechatronic systems, PG_00057023							
Field of study	Mechatronics							
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023			
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific			
Mode of study	Full-time studies		Modo of dolivory			at the university		
Year of study	1		l anguage of instruction			Polish		
Semester of study	1		ECTS credits		2.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Rafał Hein					
	Teachers		dr hab. inż. Rafał Hein					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0		0.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30		4.0		16.0		50
Subject objectives	To acquaint students with the fundamentals theory of mechatronic systems analysis and design. Explanation of the basic concepts used in the theory of mechatronic systems including among others synergy, emergence, holism. Presentation, characterization and comparison of reductionist and holistic paradigms in modeling, designing, analyzing and creating a real mechatronic system.							

Learning outcomes	Course outcome	Subject outcome	Method of verification				
	[K7_U04] is able to utilise known methods and mathematical models, as well as computer simulations for analysis and evaluation of non-stationary continuous and discrete mechatronic systems and processes	Student can apply signal processing methods for the analysis and investigation of stationary and non-stationary mechatronic systems. He designs passive and active analog filters to eliminate interference, aliasing, various kinds of parasitic effects and to reduce back-interaction between cooperating elements of the mechatronic system. Student models, analyzes and investigates mechatronic systems consisting of subsystems of various physical nature.	[SU1] Assessment of task fulfilment				
	[K7_W07] has basic knowledge on lifecycle of devices, objects and technical systems	Is aware of the periodic durability of mechatronic devices and systems.	[SW1] Assessment of factual knowledge				
	[K7_W02] has organised, general, supported by the theory knowledge in terms of systems theory and techniques, mechatronic design, mechatronic systems and exploitation of mechatronic devices	Student knows the basic concepts used in the theory of mechatronic systems. He applies a holistic and reductionist approach to the design, analysis, modeling and investigation of mechatronic systems.	[SW1] Assessment of factual knowledge				
	[K7_U08] is able identify and forumlate tasks specification in terms of design of non-stationary mechatronic systems and processes, including non-standard problems and taking into consideration its non-technical aspects	Student can plan subsequent stages of the modeling, design and construction process of a real mechatronic system, including non-stationary one.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment				
	[K7_W10] knows development trends and most important new achievements in technical sciences and science disciplines: Mechanical Engineering, Automation, Electronics and Electrical Engineering and related: Informatics and Materials Engineering	Student knows the directions of development of technical sciences, in particular in the fields of mechanics, automation and robotics, control, electronics and computer science.	[SW1] Assessment of factual knowledge				
Subject contents	Lecture. System. System structure and classification. System engineering. System operation analysis and modeling problems. Mechatronic system. Mathematical model of a mechatronic system. Modeling of systems of various physical nature. Identification methods in the frequency domain - Fourier transform of signals. Analog filtration. Passive filters. Active filters. Digital filtration. Backward interactions. Expert systems. Fuzzy systems, fuzzy signals, rules of inference, areas of application. Fuzzy control.						
	Laboratory. Spectral analysis of signals. Modeling and investigation of analog and digital filters. Modeling of complex mechatronic systems of varied physical nature.						
Prerequisites and co-requisites	Fundamentals of control systems, Control theory, Mathematics, including: linear algebra, differential and integral calculus.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Laboratory	50.0%	50.0%				
	Lecture	50.0%	50.0%
