

## Subject card

Subject name and code	, PG_00058705						
Field of study	Materials Engineering, Materials Engineering, Materials Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Zakład fizyki nanomateriałów -> Instytut Nanotechnologii i Inżynierii Materiałowej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Barbara Kościelska				
	Teachers		dr hab. inż. Barbara Kościelska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	15.0	45
	E-learning hours included: 0.0						
	Fizyczne podstawy nanotechnologii - Moodle ID: 29241 <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=29241">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=29241</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	45	10.0		70.0	125	
Subject objectives	The aim of the course is to acquaint students with the physical fundamentals of nanotechnology						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_W01	Knowledge of basic principles of quantum mechanics and understanding of its fundamental role in modern physics.			[SW1] Assessment of factual knowledge		
	K7_W07	Has basic knowledge in quantum mechanics, that is a key field within materials science.			[SW1] Assessment of factual knowledge		
	K7_U01	Ability to understand textbooks and ability to critical usage of internet.			[SU2] Assessment of ability to analyse information		
	K7_K02	Preparation and oral presentation of a seminar paper.			[SK4] Assessment of communication skills, including language correctness		
	K7_U03	Preparation and oral presentation of a seminar paper.			[SU2] Assessment of ability to analyse information		

Subject contents	<ol style="list-style-type: none"> <li>1. General concepts related to nanotechnology, methods of production and test methods nanostructures.</li> <li>2. Physico-chemistry of surface.</li> <li>3. Elements of solid state physics: crystal structure, binding models in crystal, the electron density of states, band structure.</li> <li>4. Quantum wells.</li> <li>5. Physical phenomena in nanostructures: ballistic transport, the quantum Hall effect, tunneling, Coulomb blockade, Aharonov - Bohm effect, the absorption and emission of radiation, lasers.</li> <li>6. Specific heat in the crystal, the thermal properties of nanostructures.</li> <li>7. Photonic structures and their application.</li> <li>8. Nanomagnetism: magnetic properties of materials, spin-orbit coupling, GMR, TMR, spin valves, spin Hall effect, the Kondo effect.</li> <li>9. Physical properties of nanotubes and graphene.</li> </ol>											
Prerequisites and co-requisites	Completed a course of experimental physics. Knowledge of the basics of quantum mechanics.											
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 40%;">Subject passing criteria</th> <th style="width: 30%;">Passing threshold</th> <th style="width: 30%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Seminar: presentation and writing a summary</td> <td style="text-align: center;">50.0%</td> <td style="text-align: center;">33.0%</td> </tr> <tr> <td>Written exam</td> <td style="text-align: center;">50.0%</td> <td style="text-align: center;">67.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Seminar: presentation and writing a summary	50.0%	33.0%	Written exam	50.0%	67.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Seminar: presentation and writing a summary	50.0%	33.0%										
Written exam	50.0%	67.0%										
Recommended reading	Basic literature	<ol style="list-style-type: none"> <li>1. Nanotechnologie. Red. Nauk. R.W.Kelsall i in. PWN 2008.</li> <li>2. The Physics and Chemistry of Materials. J.I.Gersten, F.W.Smith, Wiley 2001.</li> <li>3. Introduction to nanotechnology. Ch.P.Poole Jr, F.J.Owens. Wiley 2003</li> </ol>										
	Supplementary literature	<ol style="list-style-type: none"> <li>1. Fulereny i nanorurki. W.Przygocki i A. Łochowicz, NT 2001.</li> <li>2. Nanoelectronics and Information Technology. Rainer Waser. Wiley-VCH 2003.</li> </ol>										
	eResources addresses											
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> <li>1. Types of chemical bonds in crystal.</li> <li>2. Density of states? Discuss the density of states <math>g(E)</math> in the system 0D, 1D, 2D and 3D.</li> <li>3. Band structure of the crystal: how energy bands are formed and how do they affect the properties of the crystal.</li> <li>4. Effective mass.</li> <li>5. An electron trapped in one, two and three-dimensions.</li> <li>6. A particle in a potential well and the tunnel effect.</li> <li>7. Discuss the principle of the laser quantum wells and quantum dots.</li> <li>8. Define the surface tension and surface energy, and discuss their importance in nanostructured systems.</li> <li>9. Discuss phenomenon capable of varying surface energy.</li> <li>10. Discuss the electron heat capacity and thermal conductivity.</li> <li>11. Discuss the specific heat network and thermal conductivity.</li> <li>12. Thermoelectric cooling: 3D systems and nanosize systems.</li> <li>13. Quantization of conductivity - Landauer theory.</li> <li>14. Three-dimensional and two-dimensional electron gas in an external magnetic field.</li> <li>15. Quantum Hall effect and the effect of Shubnikova - de Hass.</li> <li>16. Discuss the phenomenon of Coulomb blockade and the formation of the so-called. "Coulomb diamonds".</li> <li>17. Discuss the polarization of dielectrics.</li> <li>18. Propagation of light in the crystal. Maxwell's equations</li> <li>19. What are the photonic structures and how they can be prepared.</li> <li>20. A photonic gap.</li> <li>21. What is the spin-orbit coupling (both in the atom as in the 2D electron gas)?</li> <li>22. Applications of magnetic nanowires.</li> <li>23. Spin Hall effect.</li> <li>24. Kondo effect.</li> <li>25. The phenomenon of giant magnetoresistance and magnetic tunnel junction. Transistor spin and spin valve.</li> <li>26. List and discuss the physical properties of graphene and nanotubes.</li> </ol>											
Work placement	Not applicable
