

Subject card

Subject name and code	, PG_00058706						
Field of study	Materials Engineering, Materials Engineering, Materials Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład silnie skorelowanych układów elektronowych -> Instytut Nanotechnologii i Inżynierii Materiałowej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Winiarski				
	Teachers		dr inż. Michał Winiarski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	Acquiring knowledge on the interaction of ionizing radiation with materials						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_K02		Understanding the importance of non-technical aspects and the effects of engineering activities, including its impact on the environment and the related responsibility for decisions		[SK5] Assessment of ability to solve problems that arise in practice		
	K7_W05		Knowledge of basic methods, techniques, tools and materials used in solving complex engineering tasks related to the subject.		[SW1] Assessment of factual knowledge		
Subject contents	1. Corpuscular - wave dualism; the Heisenberg uncertainty principle. 2. Models of the atom: the Bohr model; atomic spectra; the Schrödinger equation; potential barrier and tunneling effect; Schrödinger's equation for a hydrogen atom. 3. X-rays. 4. The energy of binding the atomic nucleus. Fundamental interactions. 5. Nuclear models: drip, Fermi gas, shell and collective. 6. Radioactive transformations of atomic nuclei. 7. Fission and fusion reactions and their products 8. The interaction of ionizing radiation with matter: photoelectric effect, Compton effect and creation electron-positron pairs. 9. Size and dosimetry units. 10. The effect of ionizing radiation on living matter, materials and devices. 11. Ionizing radiation detectors. 12. Sources of ionizing radiation in the environment.						
Prerequisites and co-requisites	The course is dedicated to students who have completed the experimental physics course.						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Homeworks		50.0%		20.0%		
	Written test		50.0%		80.0%
