

Subject card

Subject name and code	, PG_00058712						
Field of study	Materials Engineering, Materials Engineering, Materials Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Technologii Biomateriałów -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Beata Majkowska-Marzec				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The aim of the course is getting to know the technologies of manufacturing of surface layers and protective coatings and and evaluation of selected properties of modified surfaces.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_W05		A student is able to choose the parameters of the coating deposition process for a given substrate material and application.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	K7_U03		A student is able to produce ceramic, carbon and oxide coatings by an electrophoretic method and an electro-arc oxidation. A student is able to assess the material microstructure, hardness and wettability.		[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	K7_W04		A student is able to plan a coating production process. A student is able to design a laser machining process with CNC coding.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	K7_U04		A student is able to prepare and present a report on the obtained research results.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	<p>LECTURE: A division of methods and techniques for producing surface layers. Selected technologies of steel saturation with non-metals and metals. Glow processing techniques and their application. Production of surface layers by laser treatment, CVD, PVD and PLD. Electrophoretic production of ceramic, oxide and carbon coatings. Production of phosphate coatings (electrophoretic, biomimetic, laser, sol-gel). A paint coatings. An influence of technology and production conditions on a thickness, quality and properties of layers and coatings.</p> <p>LABORATORY: Deposition of ceramic, oxide and carbon coatings by an electrophoretic method. A micro-arc oxidation. A laser surface treatment. An evaluation of the surface microstructure of the produced coatings and surface layers using an optical microscopy and of surface wettability. Preparation of metallographic specimens. An evaluation of a thickness and microstructure of coatings and surface layers on the cross-section.</p> <p>DESIGN: Designing the deposition process of electrophoretic and micro-arc oxidized coatings based on a literature review. Planning activities related to the preparation of samples for testing. Selection of deposition parameters for a given material and application. Designing welding and laser texturing processes. CNC coding. Selection of laser processing parameters for a given material and application.</p>														
Prerequisites and co-requisites	Knowledge of the subject Materials Science.														
Assessment methods and criteria	<table border="1" data-bbox="451 663 1487 801"> <thead> <tr> <th data-bbox="451 663 794 701">Subject passing criteria</th> <th data-bbox="794 663 1137 701">Passing threshold</th> <th data-bbox="1137 663 1487 701">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="451 701 794 734">test</td> <td data-bbox="794 701 1137 734">56.0%</td> <td data-bbox="1137 701 1487 734">50.0%</td> </tr> <tr> <td data-bbox="451 734 794 768">project</td> <td data-bbox="794 734 1137 768">56.0%</td> <td data-bbox="1137 734 1487 768">25.0%</td> </tr> <tr> <td data-bbox="451 768 794 801">laboratory</td> <td data-bbox="794 768 1137 801">56.0%</td> <td data-bbox="1137 768 1487 801">25.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	test	56.0%	50.0%	project	56.0%	25.0%	laboratory	56.0%	25.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
test	56.0%	50.0%													
project	56.0%	25.0%													
laboratory	56.0%	25.0%													
Recommended reading	<p>Basic literature</p> <p>Supplementary literature</p> <p>eResources addresses</p>	<p>1. Burakowski T., Wierchoń T.: Inżynieria powierzchni. WNT. Warszawa 2004</p> <p>2.
