

Subject card

Subject name and code	Water supply systems II, PG_00058813								
Field of study	Environmental Engineering								
Date of commencement of studies	October 2022	Academic year of realisation of subject		2024/2025					
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study				
Mode of study	Full-time studies		Mode of delivery		at the university				
Year of study	3	Language of instruction		Polish					
Semester of study	5	ECTS credits		3.0					
Learning profile	general academic profile		Assessment form		exam				
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering								
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Dominika Sobotka						
	Teachers		dr inż. Nicole Nawrot dr inż. Dominika Sobotka						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM		
	Number of study hours	0.0	0.0	0.0	30.0	0.0	30		
E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM		
	Number of study hours	30	8.0	37.0		75			
Subject objectives	The aim of the course is to acquire by the student the ability to use technical knowledge to solve problems using the classical methods of designing elements of the water distribution system.								

Learning outcomes	Course outcome	Subject outcome	Method of verification												
	[K6_U13] knows the rules of application and can choose the materials of the sanitary industry	The student knows the properties of materials used in the construction of water networks and devices and is able to choose them.	[SU2] Assessment of ability to analyse information												
	[K6_U12] can design installations, networks and facilities: water supply, sewage, heating and gas	The student is able to define the technological scheme of objects and define the parameters of devices.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment												
	[K6_U11] can use selected computer programs to support design, including CAD graphics programs	The student is able to use computer programs supporting hydraulic calculations of the water supply network and the selection of pumps.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment												
	[K6_K02] understands the need to formulate and communicate to the public information and opinions on the achievements of environmental engineering and other aspects of the sanitary industry engineer's activity; is aware of the importance and understands the non-technical aspects and effects of engineering activities; makes efforts to provide such information and opinions in a widely understandable way, presenting different points of view	The student is aware of and understands the consequences of the environmental impact of activities in the field of engineering design and operation of water supply.	[SK5] Assessment of ability to solve problems that arise in practice												
	[K6_U03] can prepare documentation regarding the implementation of an engineering task/project and prepare a text or presentation including a discussion of the results of the implementation	The student is able to independently make a preliminary design, including hydraulic calculations and drawings. In addition, it defines the parameters of devices and selects them from the catalog.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information												
Subject contents	<p>Design a water distribution system for a city district (max. 30,000 - 40,000 thousand inhabitants) along with the facilities (pumping stations, network tank and intake concept) based on the output data and design assumptions agreed with the course instructor. The project is a conceptual design stage with elements of a construction project in the field of:</p> <ul style="list-style-type: none"> water balance for residents and industry, water supply network routing on a city plan, dimensioning of the trunk network using the Cross method along with its infrastructure, determination of the pressure line run on the profile for Qdmax, Qhmax and Qhmax + Qppoż, determining the dimensions of the network tank and pump parameters along with their selection from the catalog, zoning of the water supply network. 														
Prerequisites and co-requisites	Basic knowledge of fluid mechanics and hydraulics, geology. Knowledge of the principles of hydraulic calculations, knowledge of the following subjects: installation materials and soil mechanics.														
Assessment methods and criteria	<table border="1"> <thead> <tr> <th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr> </thead> <tbody> <tr> <td>Calculations</td><td>70.0%</td><td>35.0%</td></tr> <tr> <td>Graphic part</td><td>70.0%</td><td>35.0%</td></tr> <tr> <td>A technical description</td><td>70.0%</td><td>30.0%</td></tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Calculations	70.0%	35.0%	Graphic part	70.0%	35.0%	A technical description	70.0%	30.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
Calculations	70.0%	35.0%													
Graphic part	70.0%	35.0%													
A technical description	70.0%	30.0%
