

Subject card

Subject name and code	, PG_00058864						
Field of study	Nanotechnology						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	3		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Instytut Nanotechnologii i Inżynierii Materiałowej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Winiarski				
	Teachers		dr inż. Michał Winiarski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		60.0	125
Subject objectives	The aim of the class is to introduce students to the topic of analysis of electronic structure of solids and nanostructures.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U01		Student can perform electronic structure calculations of solids and nanostructures		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	K7_W04		Student understands the possibilities of relating the results of experimental and calculational methods of electronic structure analysis		[SW1] Assessment of factual knowledge		
	K7_W02		Student has a deepened knowledge of electronic structure calculational methods		[SW1] Assessment of factual knowledge		
Subject contents	1. Electronic structure of atoms, Atomic models 2. Chemical bonding theories: valence bond theory & molecular orbital theory 3. Methods of ab initio calculations: Hartree-Fock and related methods, density functional theory 4. Tight binding model 5. Analysis of results of electronic structure calculations						

Prerequisites and co-requisites	Course in modern physics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	final test	50.0%	50.0%
	mid-term test	50.0%	50.0%
