

Subject card

| | | | | | | | |
|---|---|--|---|-------------------------------------|--|------------|-----|
| Subject name and code | , PG_00058875 | | | | | | |
| Field of study | Nanotechnology | | | | | | |
| Date of commencement of studies | October 2022 | | Academic year of realisation of subject | | 2022/2023 | | |
| Education level | first-cycle studies | | Subject group | | Obligatory subject group in the field of study Subject group related to scientific research in the field of study | | |
| Mode of study | Full-time studies | | Mode of delivery | | at the university | | |
| Year of study | 1 | | Language of instruction | | Polish | | |
| Semester of study | 2 | | ECTS credits | | 2.0 | | |
| Learning profile | general academic profile | | Assessment form | | assessment | | |
| Conducting unit | Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr hab. inż. Agnieszka Witkowska | | | | |
| | Teachers | | dr hab. inż. Agnieszka Witkowska | | | | |
| | | | dr hab. inż. Aleksandra Mielewczyk-Gryń | | | | |
| | | | dr hab. inż. Beata Bochentyn | | | | |
| | | | dr inż. Magdalena Jażdżewska | | | | |
| | | | dr hab. inż. Jacek Ryl | | | | |
| | | | prof. dr hab. inż. Maria Gazda | | | | |
| | | | prof. dr hab. inż. Tomasz Klimczuk | | | | |
| | | | dr inż. Beata Majkowska-Marzec | | | | |
| | | | dr hab. inż. Marcin Łapiński | | | | |
| | | | dr inż. Michał Bartmański | | | | |
| | | | dr hab. inż. Jakub Karczewski | | | | |
| | | | dr hab. inż. Leszek Piotrowski | | | | |
| | | | dr inż. Leszek Wicikowski | | | | |
| | | | dr hab. Maciej Bobrowski | | | | |
| dr hab. inż. Natalia Wójcik | | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 0.0 | 0.0 | 0.0 | 0.0 | 30 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 30 | | 2.0 | | 18.0 | 50 |
| Subject objectives | The aim of the subject is to provide students with selected issues in nanotechnology, which are studied by the scientists form Institute of Naotechnology and Materials Engineerng and research employees conducting classes with NT students. Students interested in a given subject have the opportunity to join scientific work of research teams or cooperate with researchers as part of their various activities, including popular science, engineering and teaching activities. | | | | | | |

| | | | | |
|---------------------------------|--|--|---|--|
| Learning outcomes | Course outcome | | Subject outcome | Method of verification |
| | K6_U01 | | Inspired by the selected issues presented in the classes, the student learns on his own, obtains information and broadens his knowledge in the field of nanotechnology and materials engineering using professional literature, databases and other appropriately selected sources, often suggested and recommended by lecturers. | [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information |
| | K6_W01 | | The presentation of various aspects of nanotechnology (theory, basic knowledge and practical applications) and research methods used in nanotechnology will make the student understand the key role of the development of physics, nanotechnology and materials engineering in the progress of civilization. | [SW1] Assessment of factual knowledge |
| Subject contents | 1. Introduction 2. Conductive nanoceramics 3. Nano in thermoelectric cells 4. Catalytic properties of electrochemical devices 5. Advanced magnetic and electronic materials 6. Computer simulations of nanosystems 7. Polymers on liquids 8. Applications of nanostructures in the production of medical implants, diagnostics and treatment 9. Glass and glass-ceramic composites for bone implants 10. Domain structure - methods of its imaging 11. Nanostructures of oxide fuel cells 12. Application of nanostructures in macromolecular recognition tools 13. Plasmonic nanostructures 14. Unusual but common applications of nanotechnology 15. Synchrotron radiation in nanotechnology | | | |
| Prerequisites and co-requisites | | | | |
| Assessment methods and criteria | Subject passing criteria | | Passing threshold | Percentage of the final grade |
| | Test/survey | | 100.0% | 50.0% |
| | Participation in classes | | 50.0% | 50.0% |

| | | |
|--|--|--|
| Recommended reading | Basic literature | Nanotechnologie. Red. Nauk. R.W.Kelsall i in. PWN 2008. |
| | Supplementary literature | Takaaki Tsurumi et al. Nanoscale physics for materials science, CRC Press. |
| | eResources addresses | Adresy na platformie eNauczanie: Wybrane zagadnienia nanotechnologii 2023 - Moodle ID: 27234 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=27234 |
| Example issues/ example questions/ tasks being completed | <p>Plasmon resonance occurs in (choose the correct answer): a) metals; b) dielectrics; c) superconductors; d) semiconductors.</p> <p>List the most important properties of synchrotron radiation.</p> <p>What other issues, not covered during these classes, in the field of nanotechnology, designing new nanomaterials, or the applications of nanomaterials are you interested in?</p> | |
