

Subject card

Subject name and code	SCADA Interface Programming, PG_00044104						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2022	Academic year of realisation of subject				2022/2023	
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	2	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Controlled Electric Drives -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marek Adamowicz				
	Teachers		dr hab. inż. Marek Adamowicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		10.0		35.0	75
Subject objectives	The aim of the course is to acquire by the student the ability to create SCADA network interfaces with the use of virtual models of industrial and production processes. The student deepens his skills in using dedicated software for creating virtual processes, in which he analyzes the properties and capabilities of network interfaces. The student describes the structure of the SCADA system, explains multithreaded programming and methods of communication with actuators, describes the issues of functional safety in SCADA systems.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	K7_W08						
	K7_U03		Can prepare and present the results presentation			[SU5] Assessment of ability to present the results of task	
	K7_W06		The student is able to design and program a SCADA network interface enabling mutual communication between devices of a virtual technological or production process.			[SW3] Assessment of knowledge contained in written work and projects	
	K7_W11		The student describes the communication protocols in SCADA systems, explains the influence of transmission delay in the remote control system, describes the requirements of virtual measuring instruments,			[SW1] Assessment of factual knowledge	
	K7_U07		He can use a specialized programming environment to create SCADA network interfaces of a virtual technological or production process.			[SU4] Assessment of ability to use methods and tools	
	K7_U04		Is aware of the need for continuous training in connection with the emerging new solutions in the field of automation systems and devices			[SU3] Assessment of ability to use knowledge gained from the subject	
Subject contents	Configuration of a virtual industrial process. Designing and programming the network interface of the SCADA system. Programming multithreaded network applications in the client-server architecture - network protocols - data transmission and customer service priorities, - communication with devices operating in the industrial network (PLC drivers), SCADA systems programming environments - functional safety in systems SCADA.						
Prerequisites and co-requisites	Basic knowledge of automation, computer science and computer networks						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	100.0%	50.0%
	Final test	50.0%	50.0%
