

Subject card

Subject name and code	, PG_00059063						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject			2023/2024	
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Part-time studies		Mode of delivery			at the university	
Year of study	2		Language of instruction			Polish	
Semester of study	4		ECTS credits			3.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Angelika Duszyńska				
	Teachers		dr inż. Angelika Duszyńska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	5.0	0.0	0.0	0.0	20
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		3.0		52.0	75
Subject objectives	The aim of the course is to familiarize students with geotechnical design.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W04] possesses elementary knowledge in the field of land mechanics, ground science, land reclamation and geotechnics; has basic knowledge about the composition of air, water and soil, environmental pollution and processes responsible for their formation and ways to reduce them, knows the principles and organization of sustainable water management	Students using the knowledge of soil mechanics distinguishes types of subsoil. He knows how to improve soft soils. He knows the principles of sustainable management of ground resources.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_K02] understands the need to formulate and communicate to the public information and opinions on the achievements of environmental engineering and other aspects of the sanitary industry engineer's activity; is aware of the importance and understands the non-technical aspects and effects of engineering activities; makes efforts to provide such information and opinions in a widely understandable way, presenting different points of view	The student understands the non-technical aspects and effects of activities in the field of geotechnical engineering, sanitary structures foundations	[SK5] Assessment of ability to solve problems that arise in practice
	[K6_U16] can, when formulating and solving engineering tasks in environmental engineering, evaluate, select and apply appropriate methods and tools, recognize their non-technical aspects, including environmental, economic and legal aspects	The student is able to solve geotechnical problems in environmental engineering, select and apply appropriate methods of design and construction of objects	[SU3] Assessment of ability to use knowledge gained from the subject
	[K6_U03] can prepare documentation regarding the implementation of an engineering task/project and prepare a text or presentation including a discussion of the results of the implementation	the student is able to prepare documentation regarding the geotechnical calculation of a water tank	[SU1] Assessment of task fulfilment
	[K6_K01] can think and act in a creative and enterprising way; can set priorities for the implementation of an individual or group task; understands the need for continuous training and professional responsibility for their activities and team	the student is able to determine priorities for carrying out exercises related to the foundation of a tank	[SK3] Assessment of ability to organize work
Subject contents	Geotechnical conditions of building foundation. Excavations construction, walls, drainage. Slope stability landslides, retaining structures. Geosynthetics in civil and environmental engineering. Soil improvement methods and range of applications. Non-excavation technologies of underground pipes. Landfills - construction and reclamation. Foundation problems of selected sanitary structures		
Prerequisites and co-requisites	Knowledge of soil mechanics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	project	60.0%	60.0%
	test on lectures	55.0%	40.0%
